

491st Knowledge Seekers Workshop June 22 2023

(Transcription, Proofing done)

(Auto transcription by Elias)

ENGLISH TRANSCRIPTION

(:11).

K- Yes, good morning, good day to you. As usual, whenever and wherever you listen to these series of Knowledge Seekers of the Keshe Foundation, the Spaceship Institute. We welcome you back, and, we hope to be able to add to the knowledge. Today, we have two points of ... announcements and teaching.

The teaching, it goes back to long, long time ago, (:12). when I put the question to the scientists, to cosmologists, and to the nuclear physicists in, during the time of the student, before and after. And, those who understood, understood how much mistake we have made, how assumptions we made, just ?? like the speed of light is the ultimate speed. Now we understand, I'll explain, scientifically, digitally, that how much we have been misled, in the Knowledge of Creation. We need to know this, because then we find out, we don't end up outside the Universe (U). Somewhere doesn't exist, because we made a miscalculation. It's just like, if you heard before, aircraft was short loaded, and it crashed because it never ?? arrived, because there wasn't enough fuel. It's the same in the process of the Universal ?? travel.

So, there is a lot of mistakes made by scientists, a lot of assumptions, from 19th, 20th century, 18th century, and we stuck to it. And today, I open that, because, if I send your Soul somewhere, it has to land where it's going, not, "Sorry, scientists made a mistake 200 years ago, and we accepted it." This is all like assumptions which were made by Einstein, and now we understand it's all fallacy.

But the most important thing today, is the announcement we make. As you've been with us, with the Keshe Foundation for years. You knew that since early years of Keshe Foundation, in 2009, 2010, 11, we gave lectures, we made scientific presentations to governments, we called it 'Ambassadorial Meetings and Conferences'. We had the first Ambassadorial Conference in Nino, and then, if you remember, in Italy, later on, some years later, we gave the Ambassadorial Meeting, where we presented the MaGrav Technology, And now we understand the MaGrav technology (T) is one of the most powerful technologies. But it was given, if you remember, ambassadors came and received. (:14).

Now Keshe Foundation announces a new ambassadorial meeting. This meeting will be supported by two governments. In a way, we set up, but the support will come from two powerful nations. To make sure ambassadors in that Nation, and from other parts of the Europe, will come in for this meeting. It is one of the revolutionary points, in the point of knowledge, that the all governments know. We are here to share with everyone.

So, the announcement we make today, and it's been put on the Keshe Foundation website this morning, is that the ambassadorial conference will be held in London, on 28th and 29th of October. October, Saturday 28th, after 7 o'clock, all the ambassadors with some of them, powerful politicians in Europe will attend this meeting. British politicians at a very high ranking are invited, not by Keshe Foundation, but by the governments who we work with.

This is important that we understand, this is a prelude to 2024, what we call, 'World Leaders, Technology, Space, Plasma Technology, in exchange for Peace.' So, this time this ambassadorial meeting is to inform, as we always done. But this time, we are as part of the provider of technology. Where the invitation and the support will go both, by governments and the Keshe Foundation, to all the embassies around the World. And, embassies in London will be invited.

The reason we went with the government, is because before people started sending emails to the embassies and (created) all sorts (of problems). This way invitation will go officially by government to government. So, there is no use you writing all the rubbish which you did, because this time we ask the embassies to forward to us, who is sending what, if they receive. (:16). And there are a lot of friendly embassies, especially with the two governments, which we work so closely. So, we invited. There's a limited number of places, very limited number of places. As Knowledge Seekers (KS), you can join us in October 28th, 29th, in London. At one of the most prestigious locations in London, because we represent Keshe Foundation and two powerful nations for this conference. Where with the support of the nations, we announce the development of the new technology. ... [Audio cut] ...

So, now what we understand is that we meet in London for two days conference, Saturday whole day and Sunday whole day. But Sunday, Saturday night on the 20th to ... On Saturday at 7 o'clock, you are invited to sit and discuss your point of view, as a Knowledge Seekers, and what we see with the World Ambassadors. Even very high ranking politicians. Those who are the decision makers, and what this new technology will come. You'll understand the reason we do this, is because, Keshe Foundation has signed agreements with powerful nations, for delivery of the Space Technology, in a very powerful way. And now, we will go in through a number of governments, for the conference in London.

We will have, as the pictures you see, this was a conference with the World Ambassadors, Palestinians, with Israelis on the front line. The far end is the Vatican ambassador, what we call the Prince of Malta, in the far end, was sent by the Pope. When we invite... (:18). When we invite, world leaders turn up. And, if you were in Nino, (Italy) we had other ambassadors, who turned up, and important change even to the American policy.

This ambassadorial meeting, will be the cornerstone, before World Peace on the agreement of the new Space. It means Space, not only peaceful, but with the knowledge

and technology. And, sooner or later you'll hear, the flagship nations which work with Keshe Foundation. So, please understand, we apply, with very limited number of places for Knowledge Seekers. The same goes for outside, those who are not KS but want to be in this conference. New technologies will be shown, unseen. New technologies, with the permission of the two governments we work with, will be opened in that conference. Leading to the World Leaders Meeting, in applying the new technology. So, if you are interested and you are part of the change, and you want to put your ideas and questions to the World Leaders, to the World Ambassadors, please...

In this point, we bring everything to a beautiful beginning, with the Keshe Foundation Technology, in exchange for peace, outside the environment of the Earth, because there, we don't have nationalities. So, we bring in one of the most, what I call, celebrating days, on 28th of October in London, as one of the most prestigious places, with hundreds of people, ambassadors and government officials, (:20). possibly two or three Prime Ministers will be invited. High level government officials, who are the decision makers, will be present.

And then, we lead to 2024, 2025, for the world leaders, technology, space technology, in exchange for peace, outside the Earth. Which means we become, working as one. You have heard the prelude to this, in the past two or three weeks, by nations announcing collaboration with the world scientists in the space technology. This will come in the back of that, and a lot of the things, which we received support from governments.

I hope we see some of you, as this will be one of the memorable times of the technology being opened up. Technologies will be shown, that even Knowledge Seekers who work close to us have never seen. And it will bring that change, the last step. And the first time by that, during the conference, the first, what we call, MOJHANS, will be tempted to be, what we done, what we said, to transmute. The technology will be that level and we deliver what we said.

We come to a new point, a new part of teaching. I would like Rick to, in the background, to support and to understand about the mistakes in the world of science of today. And if we understand this, you understand how much with what we know now, we have to rewrite all the books of science. In a way, you do it yourself. Now you understand, with the strength of magnetic fields, you can travel faster than the speed of light.

So, now we understand what we said, (they said when automobiles were new), if the man goes faster than 25 or 60 miles, his eyeball ?? falls out, and the rest we found out is all nonsense, because the scientists couldn't understand. Now I want to explain something, which I've put to the heads of Queen Mary College. (:22). And, prior to that, to the nuclear physicist at British, British Nuclear Fuel, BNFL. And, the only thing I got, was a dropped jaw. And, they could not answer me, because this was wrong. The knowledge we are given, is wrong. The knowledge we've been shared with, is wrong. And, now that we come to the time of space travel, we have to correct it. Otherwise, you end up nowhere, or you end up somewhere you never thought.

I would like you Rick, if you bring Wikipedia up, it gives you the speed of light. And how many hour, what, how many kilometers, is in one light years. Don't forget, if you go to Wikipedia, and open up, and look at what Wikipedia tells us, according to the speed of light. We are presumed, we assume, that the speed of light, one year of it, which is 365 by 24 hours, by 60 minute, by 60 second, it comes to somewhere, very interesting point, of roughly, scientifically, can give us the, what we call, a very strange figure. Which, this will bring us to new understanding. Rick, if you could tell us how many kilometers, one year, speed of light is, please? You can take over the white screen and then we come back to it, if you want to share through Wikipedia.

You have to understand, that this is one of the cornerstones of present science, present understanding. That how many kilometers do we actually travel in one year, (:24). speed of light year. Would you like to read it out for us?

R: Yeah, let me see if I can find it here now. It's got a number of comparisons, it's got...

K- It says, 671 million miles per hour, which you still have to multiply by 1.6.

R: Travel times.

K- It's very easy, the speed of light is ?? around 1.9 just under 2 times 10 to the power of 9, and then you multiply it by the rest of it. And then, this brings us to a very random figure round 9,460 times 10 to the power of 12 kilometers. That is about 9,000 or 9 to the power of 15 kilometers per year a light travels. Roughly, 9 and a half times to the power of 15 kilometers. That's how much we travel, if you go with the speed of light. This is what ?? is assumed to be what we do, and all our measurements cosmologically, are based on this, light years.

So, you haven't managed to find it, but it's okay, it doesn't matter. Roughly, when you sit down, you calculate, this is from 18th and 19th century, they've done these calculations afterwards with Einstein and everybody else confirming it. (:26). But it comes to about, just over, just under 2 to the power of, 2 times the power of 10 to the 15, sorry 12 and per hour, per year. And then when you calculate it all together it becomes something in the region of 9,460 times 10 to the power of 12, or nine and a half times to the power of 15, roughly.

Now we know this is how much we travel. You've got to understand your Soul travels much faster than this. Speed of light limitation in the matter state, not in the... This is limitation of the matter state. This is, if you travel with the physicality. Now we know, with the speed of light (Soul), you travel beyond this. So, we stick to what scientists accepted and what it is.

Now, the other point I would like you to check, it says, the circumference of the Universe. Scientists from early years have decided, measured, in 18th, 19th century, and we have accepted it in the world of science as an acceptance, But, you will find out, in the world of plasma and reality of Creation, this is a fallacy. And they say, the

circumference of the planet, or of the Universe, is round about 292 times 10 to the power of 12. So, we see that we have 292 times 10 to the power of 12, to be the circumference, in light years. (:28). Which means, we have to multiply 292 times 10 to the power of 12, by that 9.5 to the power of 15, to get the actual measurement of the circumference of the Universe in kilometers. So, this gives you an amazing figure of 2.7 times 10 to the power of 27 kilometers.

So, by the present science of today, we assume we know the measurement of the Universe, accepted by world of science and cosmology, and we measured it, and we made the Universe out of it. So, our Universe has a measurement of about 2.7 times 10 to the power of 27 kilometers. The way we measure the circumference of the Earth. So, our Universe, in the Unicose, to go around itself, it has to travel from one point, back to its point, that many kilometers, to make one day, to make one day, for its life. Now, this is a huge number. If you are mathematically enough, conscious of the dropping of zeros and all sorts of things, you'll find out. (:30).

R: Just to let people know, we're not losing sound here with Mr. Keshe. He needs to mute periodically in order to avert some background noise. Okay, continue Mr. Keshe, thank you.

K- Thank you very much, thank you very much for explaining. We are in public domain, so we have to stop when we know the noise is coming up.

So now we see, our scientists, in the matter state of the Universe, they tell us that our Universe, now we don't accept the ?? circumference of it. This is a public knowledge, is not something made up by us. So, you have 2.7 times to the power of 27, roughly. I'm not a mathematician, I make a lot of mistake with zeros, but let's say I'm, I'm right, for once. Now, you come to another point. Now we know the circumference of the Universe. According to the present facts here.

Now comes another interesting point. The biggest interesting point is, that our scientists have made us to believe, that this Universe is 13 billion years old, Earth is 4 and a half billion years. Not light years, earth years. And, all this evolution, biology, physics, human mind, emotion, was created over this 4 and a half billion. Not light years, yes. So, we throw away the light years. Now, if you put 13 billion, which is 13 times 10 to the power of 9, and then you add it, by the days, by the hours, and then multiply by 1,600 kilometers an hour, (:32). which the Earth moves, you come to a very interesting point. You come to a very interesting point. You find out that it means, if we accept the 13 billion years, that the Earth has rotated, considering a plasma is a sphere, it's not flat line, so it has a circumference, it has a dimension and diameter. We, as humans, have decided through our scientists, that the Universe is 13 billion years, and we accepted that 365 days in a billion year, and we accepted it's 24 hours a day, and then we accepted 1,600 kilometers per hour, the Earth moves, which we calculate our position. We are not calculating the speed of the Universe motion, because we consider this is earthly hours we are calculating. So, what it gives you is 1.8 times to the power of 10 to the 17. Don't forget, the circumference of the Universe was measured to be 2.7 to the power of 24.

Then, if you are a very clever scientist, a mathematician, then, you come to see the two don't match. It does not match. We cannot have a circumference of 2.7 times to the power of 27, (:34). as a Universe. And then saying the Universe exists only 13 billion years, which gives us 1.8 to the power of 10^{27} , or 17. There is simply 10 to the power of 10 missing somewhere.

In a way, if you go back to the light years and light motion, you'll find out, our scientists cannot explain. We have given our Universe a fixed time of 13 billion years, with the fallacy of our scientists. And again with the fallacy of our scientists, we've given the Earth, the Universe, a measurement of 2.7 to the power of 27. And, where is that gap to the 10th power, in the volume between what we say is the life of the Universe, and what is outside. Or, did we travel more? Or, we cannot have a Plasma, if it's not encircled, it's, but closed. It's a straight line, it's expanding, whatever, but it still is a plasma.

So, we understand, if we do a little bit of clever work, and divide the, what I call, 2.7 by 1.8, one is in to power of 27, one is in power of 17, then we see our Universe is 1.5 times the power of 10 years. Difference in kilometers. And then, if you divide it back into the kilometers, you find out, our scientist has given up a lot of ?? (:36). The two don't match. And I cannot send you into space, by the assumption of the fallacies of the human measurement from 18th century to 19th century.

A new measurement, a new technology, a new knowledge in the world of science of plasma, In the science of Creation, cosmology has to be accepted. And if you think of it, 13 billion years is nothing, even to make a single human cell. And, if you go any further. If you go further, you find out, and I'm sure a lot of people will do a lot of calculation by next week, and come back, let us write the new book of science, and bring some reality into it. The Universe cannot be 13 billion years. And you have to understand, we're still working on the fallacy of their lifetime.

When I put these figures on the table, with the scientists in IAEA's division, and I put it in front of the British nuclear fuel scientists, and I put it in front of the scientists in nuclear, I said, "this is why you cannot control the heat." Because, you've made a big ?? duda (error) in the measurement of the speed. Because you're working on a matter state, where the fields of the radiation from neutron, works in a plasma condition, because it's already done. That's why we run out of control, our reactors don't respond, and we get all these disasters. This is why when we put Gans's in, we can control. Now you understand.

So, from today, you sit down and do the calculation till next week. And you, as Knowledge Seekers, come up with a figure, that is realistic. (:38). That is acceptable. That I can put you in a transmutation, and don't forget, the speed of magnetic fields, it's millions, billions of times faster than the speed of light. Now you understand, when I told you years ago, that none of the science of up to now, makes sense anymore.

This is the first time I put this on the table, in public, but in scientific world. Even when I sat in ?? UB with the nuclear scientists and professor from there, UB, I told them, "you

answer me this, why are we in this position?" "Why are we running into nonsense, and that is why we're running into "not controlling" nuclear reactors?" This is why all our assumptions in nuclear technology of today is wrong. And then the things we do, looks like a magic, because now you can see it.

In a matter state, speed of light, we are out (off) by huge numbers, in zeros, order of magnitude. You got to remember, you get a ball of 2 centimeter, fill it up with water. Then you get a ball with 2,000 times bigger and fill it with water. And you see how much volume of the water you have. Even if you go from 2 centimeter to 4 centimeter, you see that 2 centimeter gap, (:40). gives you more volume of water than the 2 inside. It's the order of magnitude.

Then you understand, there is no way. Unless you want to fool the scientists, who understand plasma technology, into accepting 13 billion years, is the limitation of life. Is limitation of life on this Universe, is nonsense. Does not make sense, or less ?? we calculate. And this is only in the matter state we are talking. And this is only in the matter state. When we go in the higher order, we find out, that really works worse. Everything worse, everything worse.

And, in reality, our Universe is trillions of years old. Not only billions. Our Universe is very much different. Our Universe is not what they let us to believe it's ?? age. And then, if you understand this, then it comes the cycle of life in the Unicose. In the world of common man we say, figures don't make sense. Unless somebody, one of you, a scientist, as a Knowledge Seekers, come up with a formula, come up with something that us common man can accept. Now we know the discrepancy.

The age of this planet, there is no way it's four and a half billion. Four and a half billion lifetime is nonsense even... (:42). If we come into understanding this, we'll find out that we are making a mistake. And then, not only we have to correct this, as the speed of light, then we have to understand the plasma works in a speed of plasmatic field, millions of times faster than the speed of light. So, even the calculation of the size of the Universe, is wrong. Then, the calculation of 13 billion years is wrong.

And then you understand how our technology is so correct. Because from day one, in understanding transmutation, we calculated everything on the speed of the plasma, on the strength of the plasma. And the speed becomes irrelevant. The speed is a matter mind. The speed is not the time of life in the Universe. Then you understand you transmute in the dimension of fields. and not in the matter. Then, the whole science of cosmology, goes into what I call, the big hole.

From today, now we understand, somebody has to redefine, or bring these two figures to match somewhere. I know how to match it. And in Book number 3, I have given an indication of how you calculate it. So this is not something new. It's already 10 years ago, 12 years ago, 14 years ago, written in the 3 books, (:44). in a very, very clever way. Read the books again. I told you last week, read the end of 3 and add it to the first three, four chapters of the 1. You'll find out.

Now you understand why. Now and from now on, we work in the age of plasma. We work in the dimension of the plasma. And we need to understand the truth. And we need scientists together, collectively to explain to us, how do we accept, how do we accept all of us, such a fallacy. Or, the Keshe Foundation is wrong. And my knowledge, and your knowledge, and everything else knowledge, comes to a halt. We have a 13 billion age of the Universe, 13 billion speed of sound, 13 billion speed of Earth, 13 billion light speed, 13 billion plasmatic field speed. There is a big difference. And our cosmologists tell us, they have fixed the number to 292 billion years, is the circumference of this Universe. And, they tell us the circumference of this planet is 40,000. 24 hours multiplied by 1.600. And then we say, multiply it by 365, (:46). and then multiply it by 13 billion, and we are somewhere on the outer edges of the Universe, because we are in a solar system, which has planetary system inside it. Inside the solar system, inside the Universe, as we close up to the center, there are still planetary systems, but in a different shape, in a plasma condition, not in the matter state.

So, as scientists, as Knowledge Seekers, today I opened up for you, the Pandora's box of knowledge. I can be 100% wrong. I can be 100% wrong, but up to today, no scientist from all the schools of science have managed to answer me this question. And this comes back to you. Can you stand this? Can we come to this point that our knowledge, our science, our technology has to answer in a much, much, much stronger, powerful way than anything else. It has to be powerful, it has to be strong enough, we have to have capability. As I said, if I give you a speed of sound, if I give you the speed of light, and I put you in the Universe, where are you going end up?

But one of the problems you have is, where is the Soul of your father, who died so many years ago? With the speed of plasma, how can I send you to connect to you (to connect to him), but you connect to him? Is he so short? Is he so near? Is he... You can understand if he's 13 billion years, and we take that as a circumference of this Universe, (:48). how far do we go? To what extent ... have we made a mistake? Have we made a yolk inside an egg, and we say, "the yolk is 13 million years, because of the dimension." But what happened to the egg? It does not make sense. Science of today, the figures of today, does not make sense at all. And hasn't made sense at all, for past 50 years to me. And now, should not make sense to you, unless I have made a mistake. Which I don't think so, maybe I've made a lot of mistakes. But these are figures, which is on the Internet. These are figures which we have accepted in the world of science of today. We measure the speed of light. And we say, this is the way it is, the way it's supposed to be, and the way it's done...

In this process, in this understanding, in this new knowledge of plasma technology, you have seen the Gans's, they are spherical, Universe is spherical. So, do we accept the yolk as the size of this Universe? Or do we accept the egg as the age of the Universe? Which they don't do match, the two do not match. (:50). ?? Don't understand what the revolution in the space technology is to come. Why, when we talk about the matter state, we don't even consider it as such, we say the Soul of Physicality (STP) is inside us, the Soul, because literally, the STP is that egg yolk, where the Soul becomes the (shell of the) egg.

Where today, the Soul of the Man (STM) has been kept, by the shell of that egg, Calcium, inside, trapped. And it's not allowed to travel with its true speed, where the physicality takes the speed of light, as a maximum.

Sometime, if you understand, how the STP has managed to interact the STM with the highest power and strength, then you, the biggest key in the human world of Creation will open up to you. How the weakest can manage to hold the strongest in a trap. And once you understand this, or once these Knowledge Seekers in the future, become knowledgeable enough to understand how it's possible, then you understand the common denominator of the life, which we call, Hydrogen. Then you understand why Deuterium becomes part of the cycle of the transmutation, and how Deuterium in combination becomes what we call it as, because you understand it as a C14, becomes a line of communication and connection. And then above and below, in the matter and a higher order, in the Universal transmutation and transportation.

Now, you Knowledge Seekers, as we say in English, (:52). "I have put a cat amongst your pigeons." See where your pigeon of knowledge lands. And how much you have accepted, digital numbers, which your own human scientists have given you. We are not bringing anything out of our pocket. These are numbers which on a daily basis are taught in the schools and universities to our children, a world of nonsense. And then, we try to tell our children, "oh, just forget it." Exactly where, every time you run into problem of knowing you're wrong, you call it assumption, and you become Einstein. This $E=mc^2$. Even that now has become a joke. If you understand, the matter ?? speed in plasma.

Then you understand, in the world of science, in the world of the Creation, there are no assumptions. You cannot make assumptions, it's impossibility to make assumptions. Once you start assuming, it means you're wrong. Because, you have to clarify that uncertainty, that there is no assumption into it, that $E=mc^2$ has got hundreds of assumptions in it, because the guy was absolutely not a scientist. This is how he kept his books ?? strict, by assuming this is that, and that is that, and he could give it to ?? the tax man.

You're accountable to yourself, you're accountable to understand, as we said, (:54). in the coming time, you are the travelers of the Universe, you are dictating where your Soul goes. "Oops, I ended up in a different Universe, because I listen to the human scientists." So, it's very simple. Two point whatever, to the power of 27, according to the science of today. And we are inside the yolk, not inside the white, and the shell of the egg, what we call, Universe, and the numbers don't add up. The science doesn't add up. None of it adds up.

And after today, everything added up, because we ??. Now you understand what we will show you in October 28th. Science on the basis of reality of the Creation of the Universe, not on assumptions of a, what I call, "an accountant," who never understood how to account. That's why they wouldn't let him to be accountant. He could not fool the tax man, but he managed to fool the whole of human race as Einstein. Because his numbers does not add up, that's it ?? in his ?? account.

Now you have to understand. Now as Knowledge Seekers, that you want to travel with the speed, to see your uncle, your mother who died 20 years ago, and take a speed of light, multiply it by hours, multiply it by seconds, multiply it by speed of, let's say, light, which is the maximum, (:56). then you should be able to find out where your grandfather could be, in what layer of the shell. And then, you have to have a simulation that it increases by speed of light per second.

So, this is how you're going to find out, where your mother is, your "Soul of mother" is. Now you understand, why I brought this topic up. Now it's time for us to become engaged. The knowledge I've given you, the knowledge I've brought you, it takes all the Universities of this planet for years to come, to work on it, than trying to find a nuclear bomb. Because, nuclear radiation has a power strength, which man has never found out, and that's why it runs out of energy, and it goes into explosion and ?? around, gives us all this mayhem and the fear, and we call ourselves, nuclear power people. We have a power because we don't understand it, but it can do.

Now we understand it, I can go faster, I can create a system more powerful to absorb. And this is what we saw in Fukushima, this is what we said, "you don't need Plutonium and Uranium." Now you understand. I cannot send you somewhere, where your mother isn't. I cannot send you to a planet, where it doesn't exist. If I send you to the measurements of the today knowledge, on the edge of the planet, you end up most probably somewhere in the center of the Universe. Where you wanted to be, on the other edges, where the Soul of your mother is creating a new star. (:58).

We don't need stars and expansion in the center of Universe. We need new stars on the outer bounds of the Universe, as it grows and expands in the Unicose. So now you see, there is a lot of discrepancies, in the fallacies we have accepted, as men of science. I think, a little boy, in a primary school could tell you, "Einstein was nonsense." Now it doesn't make sense.

We have to rewrite the book of the Universe. But we have to understand what we are rewriting, that we don't make the same mistakes as knowledge of today. Because then we put limitation on our children's understanding of the future of space. Then we come. The beauty of it is, ask yourself a very simple question. I asked this question many times, and now I put it to you. You have to understand. You got to understand how I understand the physics, how I understand creation of life, because things have to make sense in what I've been told, and none of it makes sense. If we can, and if the magnetic field travels faster than the speed of light, or it's the ultimate in interaction with the field of each other, we should see two magnets sitting next to each other, light. Never seen, unless in the matter state. So, the speed of light should be a very little things, at the bottom of scale of the speed of the motion in the Universe, that we don't even absorb its light. Because interaction of the fields, like the Earth and the Sun, create light, creates fields, it creates radiation. And we don't see that. We don't see light when we put magnets (together) ... (1:00).

You've got to understand, man's knowledge lacks a lot of truth. Today's knowledge, not your children and your grandchildren, that they know the new knowledge. Then you understand how I travel you to the moon in milliseconds of your time to the speed, and when I speak about the speed of light, and you'll be on the moon within minutes, seconds, now you understand how.

The new space technology, the new understanding of space travel has to bring new dimension in understanding the reality of the Creation, and the life of the Creator within it, which has created it. Not with the fallacy of the men, especially if they are Jewish. Just because they're called, Einstein. And we've seen so much harm, by this narrow-minded race of Jewish, what we call, mentality, that has destroyed the whole world of the science. What I call, community of gangsters. We have mafias who control money. The Jewish community, because they can push things around, have tried to change the course of man in the science, and has come an end to this nonsense of this society.

You saw us, when Netanyahu came out with showing Keshe Foundation nuclear reactor as a Iranian nuclear bomb, we hammered it at the IAEA, and within days, (1:02). we got IAEA in Tehran, and they said, "it's nonsense what they said about the ?? nuclear bomb." And we don't hear it anymore. Now we have to understand, the rest of the nonsense comes out of it. These people has to be stopped. That we accept, does not matter race, religion, or color, the truth about the world of Creation. About the science of Creation, and not be controlled by those who are after false glory, as we've seen.

The day will come which man will erase anything which got Einstein on it, because there's never been such a criminal in the world of men, especially in the science of man. That has put limitation on man understanding of the Creation, because he had no brain anyway to start with.

Now, you have the figures, now you have data, according to your scientist, man's scientist. You tell me, by next Thursday, how much do you think is assumed, how much you think you can calculate, is the dimension (D) of our Universe, the dimension of our, what we call, age of the Universe, considering the speed of light, is different (than) the speed of magnetic fields. And when you see, you understand this, then you come to understand, the Creation is much, much longer than 13 billion years. It is not even the first few seconds of the Creation, 13 billion years.

Does not add up. And, sorry, I cannot send you to 20 Universes further down, because Einstein said, "there's a speed of light, a maximum." (1:04). And other scientists measured the size of our Universe, at 292 to the power of 10 or 12 light years, or whatever limitation we have come up with, by 27. And it's very important. One day, one day I explain to you, we're in the midst of a lot of numbers and calculation, how man has gone wrong in many other things, because they had to follow.

As I said, some of you Knowledge Seekers were with me in that meeting. The scientists, the government officials who understood what Keshe Foundation is, the scientist next to him said, "Newton said that, and equation of relativity says that, and this is against what

you say because it's in the books." And the man on the top said, "Now with Keshe we'll write the new books, let them learn from us." And this is what you're going to see from now on in the Universities, education centers of the countries which work with us. Because we put no limitation on the speed. The speed, and what we can travel with, is a limitation on our own understanding of our own world of Creation. Not a Jewish man, could not even account to an accountants and a tax man, and he taxed the whole man with his stupidity.

There is no limitation, even the speed of light which you measure, is the fraction of actually what the light travels with. Because you only rely on the visual, on what you can detect with man's meager knowledge in technology, and this is going to (stop) ... (1:06). Now you understand. Now you see how the limitation they have put on us, has put limitation on us, to understand the reality.

I hope today I open your eyes to something new. Not new, to something which I could not accept and did not make sense. And as a scientist in the world of plasma technology, which I hope I could be considered a scientist, somebody who thinks beyond the frame of the lies we've been given, what are we going to do now? You know how many television programs are going to be changed? How many literatures have to be written off because of this 13 billion?

Knowledge Seekers, this is your job. And on 28th of October, I'll give you the platform. Any of you who can confirm, who can logically, with what you know now, can come. I stand next to you on the platform. Not just one, collection of you, to explain to the rest of the world. To explain to the ambassadors of the world, to explain to the leaders of science of the world, what you think is the age of this planet, the age of this Universe. If you understand, even when they tell us, the age of this planet is 4.5 billion years, and then the age of the Universe is 13 billion years, Ah oh, we must be the old people of this Universe, because we have already lived one third of it. (1:08).

And then it comes a lot of other questions, in the world of Creation. Then it comes, why I brought you down the line of teaching, Because, I cannot send you in transmutation, measuring this is the position of the Moon, I'm using plasmatic fields, and suddenly you end up in another Universe. Because Einstein said the speed of light is this, and it takes so many seconds to get there. Now you understand. If Einstein says it takes a thousand seconds to get there. And you're working with the magnetic fields, think about maybe one second. Then you end up at the actual orbit where the mother is and you have a meeting. You don't go to another moon ??, you're in New York and mother, "oh, I'm here by mistake, ended up in London."

Have you ever done this? Go to airport, go to a travel agent and ask for a ticket to Oman. And then they give you a ticket to Amman in Jordan. But you say, oh, I want to go to Oman as a country. It's a big difference. And I'll tell you why. It's happened to me. I bought a ticket to go from Rome to Oman. And just before boarding, it says an hour and something flight. I said, excuse me, there's a mistake here, because I know where I'm going. It's only a six-hour flight. Oh, the lady made a mistake. She took the Amman as

Jordan. you're flying to, not to, Oman, as a country. Now you understand? I had appointment in Oman. I would have ended up in Amman in Jordan. And I've been to both, and they're both beautiful, but thousands of kilometers apart. Our Knowledge Seeker, our friend who listens to the teaching, he says, (1:10). "I know, because he would have been waiting for me in Oman, and I've been in Amman in Jordan."

This is where knowledge has to make sense, where the technology of the future has to make sense. We as Knowledge Seekers, we don't accept any more fallacy. Ages don't add up. Thirteen and a half billion years, age of this planet, this Universe according to us, and four and a half billion, puts us in the wrong place. We should not exist in that position. We are too close to the center, and the compressions of the fields does not allow life like this.

So could you please calculate how many years ago, how many minutes ago, your mother passed away? Or you met your brother, and he's in another Universe. He's not dead because he is with his Soul, you end up in the right place with him. Now you can calculate. Put the speed of light which Einstein says is the right number, and then calculate how many hours on second and minutes your mother passed away. You should make a circle around where you are and say, "Ok, my mom is somewhere there. I'm going to look for her." You are in the wrong place to go.

Then you understand connection of magnetic fields the interaction of magnetic fields come to play. So, our fierce Knowledge Seekers, get to work! And on the 28th of October, you have a platform to bring this into play. And you understand. Then you understand how much wrong and how much fallacy, (1:12). as we think we've become so clever, we've got tricked by a much cleverer ...

Now, we invite you, you invite yourself, come in, as a group of you. The scientists, scientifically, today's teaching, now become the science of Knowledge Seekers. You made the MaGravs, now do the calculation. And then I tell you, why you couldn't get your things out of the MaGrav. Welcome to the world of reality, acceptance of the truth by yourself and nobody else.

We are not indoctrinating you, we're just explaining what we've been given, does not make sense. It did not make sense to me at the age of 10, 12, 50 odd years ago. And the more I gathered knowledge, the more I understood about the world of Creation, it became worse. 13 billion years, take it from the center of the Earth and move out and see how many kilometers it becomes. And then make a circle of it. And say, our planet, our solar system, is on the edge of the Universe. We are on the edge. Which one are we going to accept? Did any scientist ever put "2 and 2" together? Or were they too afraid to say, because there wasn't ?? down that side of the stream of life? If they would have come with 13 billion light years, (1:14). maybe we could have compromised somewhere. 13 billion years, it doesn't add up. Does not add up. Is out by the factor of 10 to the power of 9. Minimum. And that's in the matter state speed of light.

So, now you understand. We have to do a lot of things to be able to transmute you, to create the condition of transmutation, and it has to be in the plasma condition, that you

travel with the speed of plasma, which is not in the matter state. That's why we put your STP inside your Soul, to get you shifted, and not letting you go with your body. With your body you can go as much as you like. With the STP you can go as much as you like.

And then you understand, new science. You understand new cosmology and everything else changes. Even the world of medicine will change if you understand this. The world of every science and dimension will change. And then you have to understand a new world, a new way to create gravity and magnetic fields. Not the way you've been doing it.

We have to redefine the science to be able to create the true science of the space technology. Otherwise we are back in the same thing, and we shoot it a little bit, put some "Chinese firework" in the back of it, and we gloss it up, till the next one finds out, "ah oh, this was all lie."

Thank you very much for today. And, as I explained, we'll close the teaching early today, and we have a frame of hours to do the teaching. I'll let you one or two questions, and then we come to an end. We don't take any breaks, if there are any questions, (1:16). and then next week we go in more detail. We understand more.

But please start calculating. Am I wrong? If I'm wrong, it's to me I'm wrong. If you are right, add up the knowledge of today, and by next week let's talk. The discussion is, I cannot send you to somewhere where your mother is not. But, if you understand, when you went into the Enhancement Unit, and you met the Soul of your mother, those of who came to see Jesus, and you met, and you felt him, then, it cannot be ?? correct.

Are there any questions?

Q: .. We still got to define the incongruency between the British billion and the American billion. Those are two different ...

K- It doesn't matter, it's only point, it's only three digits, three zeros.

Q: Exactly.

K- That doesn't make even, you're still 10 to point 7 up, or 10 to point 7 down, doesn't make any difference.

Q: Fine, but did you talking about quadrillion or quintillions?

K- We always talk billion as 12 digits, 12 zeros or 12 digits. This is how we calculate. Not in the...

Q: Fine.

K- And then you understand.

Q: Yeah, so do I, because you were brought up in the British school, but the Americans...

K- It doesn't matter. I was brought up in the international school. So, billion to us is 10 to the power of 12. Million, sorry, billion is to the 9. Trillion, million is 6, billion is 9, trillion is 12. (1:18). So, we go on either numbers of 12 and 9. I've calculated in every way. Even 12 billion, we went on the third, what we call, 10 to the power of 12. You understand? Because we calculated your way, or our way. If you go down to the power of 9 billion, you're in a bigger mess, in a size and measurement.

Q: Exactly, yeah. Yeah, that's why I go down on defining each number, because we've got a big error there.

K- No, it's 5 to the power of times 10 to the power of 3, is the order of magnitude, we calculate on a power of 12. In easier way to do it, than to the power of 9. Because it gives you a bigger dimension, and it's more towards the, what we call, speed of light, above, what we call, the speed of magnetic fields. It's an order of magnitude. If I go by billions as nine, I still stay in the matter state. I allow it to go to the 12, in to be in the speed of plasma. It's a big difference. It's a very, very big difference, but in order of magnitude, we allow this calculation to go to 12, because it shows a bigger problem, when you go to the speed of, what we call, magnetic fields. Or the magnetic. The weakest magnetic field, not the strongest.

In a stronger magnetic field strength, you go into the order of 20, 30 and 40. We brought it down to what is just about what man can understand. (1:20). If you do the same thing with a 10 to the power of 9, or 10 to the power of 12, we calculate on the American side or the European side, or we calculate it on the difference in the power of what we call, magnetic field, in order of magnitude, than the matter state.

This is one of the biggest problem, that in the future, in the coming time, we'll explain more and more. Now you understand, how we accept fallacies. It doesn't work. Thirteen billion years, in a magnetic field on American size, or European size, gives you what we call, roughly between matter and what we call, magnetic field side. I always work on a 10 to the power of 12 as a billion, because it is fields which we can understand.

Any other question?

Q: .. As to last week's teaching, the Souls of Earth create similar solar systems and planets. So my question is, who created us? We must come from the Soul or Souls similar that seeded our solar system. And is the killing... (1:22).

K- It is that, this is very correct. This is what we mentioned a few times in the teaching. When the ?? came spreading. Carry on.

Q: She goes on. Is the killing issue from that Soul, or the environment of this planet?

K- It's the two which has led to this. It's a combination of two. You have a seed, which is short. But then you have an environment which gives... It's like a Gravitation and Inertia.

One is an attributes of the environment, one is attributes of what we call, state and position. If, if, there are, there are few factors, for example if you look at most of the planetary system, which don't have the seasoning, they are not tilted. You get this situation of singularity life. Which is always perfect, because does not need to gain any ?? thing. It always works in a balanced state, more or less. Where on the four seasons, we always have to ?? compromise between one or another, summer and winter, and the rest of it. Then, there is a gap between what we call, the two seasons. Today is what we call, 21st, 22nd. We are at the longest day of the year, and then we start going shorter, and then we see the balance on the fields, and how life creates, till we go to somewhere around 21st of December.

In these conditions we get the changes and we get the life. (1:24). ..
So, we understand a lot of things and yes, partially it is the Soul which created this, and partially now we're creating the same Souls across the Universe, because we came the wrong way. And several trillion people dying, or animals and creatures Soul created is, not much in the world of the Creation. All the Souls which we have created from the establishment of the life on this planet is a speck of dust, to the other Souls which have created the Universe. So, trying to clear that out.

Sorry about that today, we have to cut short, and we meet next week. Do your calculations, but work on the 10 to the 12. Don't work on the 10 to the 9, billion, because then we'll teach you some more, why we chose these numbers. This proportion is much easier to understand the bigger scale of the work.

Thank you very much for today Rick, and we see you next week, and we'll see what we can ...

R: Okay, very good Mr. Keshe, thank you very much for today's teaching. Very concentrated and important teaching I believe.

K- We'll see, and thank you very much. And please, do your work, to understand more. And the 28th, 29th meeting, is a forum where we want Knowledge Seekers to bring that change, in the world of science. And then start looking at the new dimensions. Even your MaGravs, start measuring fields, start understanding how we transmute you, we don't transport you. Thank you very much, and we'll see you next week, as usual time. Thank you, Rick. (1:26).
