

498th Knowledge Seekers Workshop Aug 10, 2023

(Transcription, Proofing done)

(Auto transcription by Elias)

ENGLISH TRANSCRIPTION

(:20).

K- Yes, thank you very much. Good morning, good day to you. As usual, wherever and whenever you listen to this series of Knowledge Seekers program of the Keshe Foundation Spaceship Institute. As usual, we welcome you back. And as usual, we try to understand a little bit more. (:22).

Last week, we touched on something very, very important, and the week before. And we build our knowledge of today on the basis of the past 3, 4 weeks. One of the most important points of our work, as we said, we have managed to, in connection and cooperation with the Chinese military, show the production of materials, show production of organics, show the production of elements, doesn't matter in what shape or form. But, what is the ultimate target? Are we still going to make Calcium, Copper, and Zinc and whatever? Or, is the ultimate target of all this work, is to be able to understand, to make the Fields of the Soul of the Man (STM)? At the strength of it's work.

We have replicated to show the energies of the Matter. The ultimate goal is to be able to replicate and produce the energy, the spectrum of the Fields of the Universe (U). And one of them be the strength of the Field, which leads us to the Creator. This is the work, this is what we are targeting for.

And this is not just to show we made elements, it's not to show we, we managed to make a gas. It is a stepping stone towards the ultimate goal. To create that ultimate field which makes us, and that process allows us in that position, create a condition for us to board the line, jump on the line, connect with the line into our Soul, to the dimension (D) and direction of the Soul of the Creator.

But, we are learning step by step, we are learning gradually. (:24). We came in with nothing, we came in with a stick in our hand in the caves. We didn't even know what a fire was, that we understand the energy conversion. We learned step by step about the metals. We mastered them. We alloyed them. We made chemicals. We became nuclear physicists. Now we become Plasma Physics, and then we become "Creator Physicist." How do we find a line to our Creator? And then with that we become the ultimate goal, we become what all the Creation is about. To become that part, and parcel of the Creation.

When you look at the magnetic fields of the Earth, it starts from the North Pole and it turns back to the South, as you've seen in many (pictures), that Earth is the "creator," it's the center. And those fields show the way you can get to the center of it and become part

of it. Creates its atmosphere, creates its dimension of Creation, interaction with the others. And this is all the ultimate goal, to be able to jump on one of those fields. That in rotation and movement, in the direction of what we call, attraction, we become part of, we touch the Soul of our Creator within, when we go through it.

When a magnetic field goes through the Earth, touches what's inside, in the center, absorbs energies from it. And as we know, the North Pole, the North Pole of the Sun, or the Earth, is always slightly warmer than the South, because it's gathered energy, it's gathered magnetic fields from the center. And, somehow it's become part of it. And this is the whole subject, this is the whole principle of the teaching. The ultimate goal.

Will it come to the point that we can create fields, that the interaction of their fields, will... the interaction of the field of our Soul, (:26). puts us on that path. That we become in that part of the hemisphere. We become that part of the atmosphere and rotating, we create the dimension of manifestation of the existence of the Creator. Now you understand what it means, "I am the beginning, I'm the end." I'm the Creator and I'm created from the creation of my own.

Now, what's the ultimate goal? How do we make that system? To make what... if you go back to the teaching of the... some months and years ago, I taught you, I told you many times, "make Gans's of Gans's." That the interaction of the Gans's of the Gans's, allows you to create that field which leads at the strength, if you get it right at a certain position, the strength of the fields to get on that line of the loop, of the fields of the Creator. How closer you getting, or the further you are, is the strength you absorbed. And then the closer you become, the more enlightened you become. The more you have to give.

The fields of the Earth, 50 kilometers are cold, and the fields which are near, in interaction with the field of other, and the Inertia, creates life, condition of life. Condition of existence, manifestation, creation. And this is all it is, we are somewhere 500,000 kilometers away from the center. And we are trying to jump in, "frog leap," and come into the inner circles, to be able to get close enough to Earth, to close enough to the Soul of the Creator, that we manifest, we show the Creation and the Creator through his Creation. (:28). Now you understand.

In the coming time, in the coming days and months and weeks, we endeavor to make that system. We are working on it. We are working on making a system that creates the fields of the Creator, the ultimate goal. And then in the interaction with the STM, becomes the will of the man. "I am in command, through the interaction of field of my Soul, to create what my wishes, in the dimension of the wishes of Mitra." We are all servant to her, and nothing else. And through serving her, we serve the Creator, and nothing else. And Mitra it's not a creation, it's not an entity, it's the principle of interaction of the fields of the universe. It's a path of living, it's the way you interact to lead to creation of the perfection.

Now you understand. All this teaching, all this going from Gans's to this and that, and the MaGrav system, and the rest, has been to bring you gradually to the position to be able to create the fields of the Creation. Then, you become the beginning, and you become the

end. Depends where you jump into the circle, on the North Pole as it comes out, or on the South Pole as it goes in. But that "Pole" is your Soul, that Pole is the Soul of the connection of you with the Creator.

Every Soul, in the essence of its creation, at the point of its manifestation, has the field line common denominator with the Source. There is none, no life, there is no Soul, there is no existence in the universe, which has no direct connection to the Soul of the Creator. (:30). Now it's our job to find that, to find the strength of, to create, to build systems within ourselves, outside. Man is genius in building machines to replicate and create that field. That single field, that in coming in touch with, in connecting to, we get enlightened. And then, we see the whole knowledge of the Creation. And we become part of the Creator, that itself is created out of his own creation. It's very much if you read the Book 1, it's the story of the Creation, interaction of the field, which leads to Mass and to Weight, out of interaction of their own by them.

Now where are we going? And how (do) we reach this? We have shown in the position and the power, creation of some 30, 40 elements and organic elements in the past few weeks. Keshe Foundation (KF) in collaboration with the Chinese military, now endeavors into the next step in the coming days. We endeavor to create a new condition. We endeavor to show the existence. That is, how actually it starts. And where and we enter the fields. And then where can we exit the fields. For you to get from North Pole to the South Pole, if you're lucky, and you're on a rocket, or you can drive and swim and everything else, takes you a few weeks to get from the North Pole to the South Pole, or at least a few days. But, the fields of the Earth from North to the South, is instantaneous.

Now, we are interacting with the field of the Earth. (:32). What about the fields of the universe, which already interact with the field of the Earth, and we jump on them? And then, what about the fields of the Unicoise, we interact with us, within the structure of our universe, if we get on them? And then we know all these fields comes from the fields of the existence of the Creator. What about if we jump on that? It's not impossibility. It's the lack of knowledge. It's not that it's in the dream, it's the reality that we have not understood the principle. And now we are setting in that direction of dimension.

In the coming days and weeks, we will show a new dimension, a new structure, a new way to think, to interact, to feed. I walk within the fields of the system and I receive what I need, as medicine, as food, as energy, as the interaction of the fields to interact with the Creator. We are entering a new dimension in science and technology, we are entering into a dimension that we can put a blind (man) near the system, and he walks out, that he can see the whole Creation. Not only the physicality (P) of the man and the Earth.

The exploration of the science and technology in the coming days, with the Chinese military, will open a dimension in the world of science, that even the scientists will not be able to understand. It'll take them hundreds of years to understand how we did it. And how we will develop this position and condition. where you can bring a man blind and walk him out. (:34). He can not only see himself with the eye of the man, but opens the eye of the STM to the world of the Creation.

We saw the beginning of this process. We saw the structure of this process weeks ago. When the first Chinese military officers walked into the room, and they saw fields, they saw everything, and they could not believe. But I cannot tell them what's in there, because it breaks ?? .. our understanding, these people are blind to the knowledge. Now we set to watch. We set cameras, field detectors, and everything else possible, to understand how can we find a Soul, can we find a fields interactions, and then we invite the world leaders to see the world of the Creation as it's created.

The collaboration between the Iranian government, Iranian scientists and Chinese in next few weeks will break through a new world of science, beyond man's imagination. Because when we showed it, and when it was seen, in the past few weeks, has put the scientists, and the military and the man to be baffled.

It's an unknown science, but we have two choices. We have... we can drag you along in bits and bits, or literally drown you in it. And I think drowning the man will be better, because he will learn to swim, than dragging it, that the hope he'll one day get to the water. The understanding of the science, the understanding of the technology (T), the understanding of the knowledge of Creation, is at the reach of every man. (:36). It doesn't need any Prophet or any Holy book. It needs clarity of understanding, it needs the being in the position. Being in a position to accept, to see, to analyze and then not to judge.

As I always said, repeated most of the time, when you came to Linz, we said, we are not there to judge (you). We accept what you see, what you've seen. Some saw the mermaid and some saw and felt the Soul of the Christ. Some went on the Moon and touched the stone. And some came to see nothing, came blind and went out blind. The arrogance bring blindness. And the servitude brings wisdom, understanding. And that comes through the Soul, that comes through the interaction of the fields. In talking to man, Man has seen and has to see everything in the dimension of physicality. In talking to the wise man, he understand the wisdom of the Creation and sees the fields.

In the coming days, and I'm sure if we get the collaboration and the work of our team and with the team of the Chinese military, we will open, we will show, we will detect, we will do everything to bring in a new dimension in the world of the science and technology. Where we do not need to produce anything to live, and once we connect to it, we are connected for life. We shall not kill, as we receive what we need. (:38). We live through the dimension of the purity of Mitra and the ethos of creation, and in all three dimensions of the essence of the creation of Mitra.

Maybe, maybe now, maybe in the coming time, maybe in the next few weeks, we'll change the course of humanity by physically showing it to humanity. Many of you will burn your books, and many of scientists will deny the existence of the ?? past. But it has to be understood. We deal, we work, and we show the dimension of the fields in motion. What we dealt with up to now, as I've said many times before, is a matter state.

There is a difference. Maybe. In a simpler way, I can explain, it' .. matter state is connected to the Inertia of the fields in matter state. And the plasma state is connected to the inertia of the plasma state. And both exist in collaboration, in conjunction, and within each other. The man exists with the Soul within it. So man is aware of both dimensions. To what extent, to what limit, you as Knowledge Seekers (KS) come to cross that line, get rid of your dogmas, get rid of what you've been told in the matter state, hold it, treasure it, and keep it. And then try to understand the world of plasma, world of Creation.

But the best tool, the first thing I could give you was MaGravs. And I keep on telling you. (:40). And I'm hammering it in, and I'm hammering it in, and it's still there. "It gives only 30% reduction." No. See what fields it creates. What are its potential? What are its dimension? And then take the next step. And maybe, maybe in the coming time, you as KS will become the first passengers of the Unicose, then the Universe. It doesn't take much. It's just a "flick of a finger." It depends how you flick that finger and how it ends up, and how that coil rotates, and how it lands.

Try to visualize the interaction of the fields from a bottle of Gans in front of you. Try to visualize the interaction of the fields from a dynamic coil in front of you. Try to visualize the existence and interaction of the fields of the Gans's in front of you, with the room fields, with the atmosphere you're in, within the Earth. And then see, if you have not missed one thing, you were too busy to see how these fields goes, and you forgot that fields are already interacting with your Soul. Then you understand the wisdom of knowledge. As usual, too physical, you forgot about the reality of the Creation.

The teachings from now on, is not so much about making things, is so much about understanding how to connect fields. And, as I said, (:42). the Creator did not make a machine to make fields, He was created out of and He created from it. Now you're in the same position. Try to see, try to understand how you can make reactors without motors, that only interacts within the fields. I released this paper years ago, "Creation of the Motion in the Universe," and no one looked at it. Maybe, it's time to go and back and look at it and read it, and understand it. And then you might be enlightened, how man has reached the condition of creating motion, as you call it, motors, without engines, without burning fuel, without coal mining, without the donkey pulling and something else pushing.

In the process of understanding, in the process of the totality of being part of that, in completion of the course, man needs to understand the interaction of the fields. How and which fields he will use, to heal his cancer. How and which fields he'll use to satisfy his hunger. What fields and what position he'll use to create water, that he does not go ?? off. A few of you who joined, you were flooded and you could not hold enough water. You were producing so much that you were drowning in it. If you push it a step further, you should be producing so much fields, (:44). that instead of feeling it in your mouth, you feel it as elevation of your Soul. Enlightenment. But, as you are so materialistic, having that water was more important than actually elevating your own Soul.

In the coming time, as we develop the systems for the creation of the ultimate fields of the Creator, many of you will walk away from physical life. Many of you around the world will link to the line, to become the "passenger of the universe." Many of you will come to the position to understand, this physical life is not worth, as it stops the pleasure of enjoying the dimension of the fields of the universe. We were happy with the room in the village. We came to town, we made apartments and villas to enjoy the city. Now we take our Souls for a trip, in the dimension of universe. But we have to understand, how and what, and what to give and what to take, that we make sure we reach home, we don't go backwards. And come forward and says, "oh, I was there before, haven't I?"

Try to envisage, try to envisage the fields and not the matter state. Don't look for electricity, look how interaction of the fields created that electricity. (:46). Many times, I asked you to look at the fields of the MaGravs to understand it. Try a new way to interact with your Soul. Try a new way to elevate your Soul. Try to understand the fields. Try to become part of it, and not an outsider observing it.

In the coming weeks, I will show many of you how to reach that point? How to extend the Soul? In the meeting in Manchester in the next couple of weeks, we start this process. And in a way, you have time till November to practice it, your "homework." And see how many of you in that process manage to reach or understand the process of the creation out of the fields and not out of the books of the history. (:48).

In the conference in Manchester, in the ?? teaching part, many of you will come to meet, to feel, to understand your Soul. To be able to cross that line, and to be able to understand the Totality of the Creation. My only wish is, that by the time we finish on Friday, those of you who understood, do not need a flight back home, as you already are home. Home is not in the dimension of going back to Mexico, or Canada, or somewhere else. Home is finding a way to the path of the Creator. For yourself, by yourself. Through understanding of the fields, interaction of the fields, in being able to manipulate the fields of Creation.

I hope many of you will come to understand more in a shorter time. But I'm sure in the trials coming up with the Chinese military, as we try to understand and transmute in the time to come, the Chinese military forces from one point to another, we bring in a new dimension of life, a new dimension of science and technology, as we become the "soldiers of the knowledge." (:50). It's not easy. It's not going to be an easy task. But, we have to. We have no choice, but to start somewhere, and then build on it. To the next step, to the next understanding, to the next completion, and accomplishing what all of you have been waiting and wishing for.

Try to understand the fields of the connection. Try to understand the Totality of the Creation. Try to feel the fields, and try to understand the operation of the fields within you. Many years ago, I explained to you, you can hold your hand and create a light in the palm of your hand. I think the knowledge has reached that point that some of you can. If you understood the work, some of you by now should be able to do this. At least you can make attempt to do it. And then, it's not the light in the palm of the hand which we are

looking for. Then it's the light of enlightenment, the light of understanding, the light in a way as knowledge, not the physical light to be absorbed.

New systems, new technologies will emerge from the Keshe Foundation in the coming months, and weeks, and months, and days, and God knows years. But, we're still making Gans's, and still making Gans waters, (:52). and God knows what. But again, as I said, it's like a school from zero to twelve. Depends how much you understood, in which class you sit. Try to comprehend, try to feel the fields. Try not to pretend, but understand the reality of the Creation.

Thank you very much. The teachings are short, but very deep, and you have to understand it. We go through a small break, and we come back, and see how we ?? baffle the knowledge. Thank you very much Rick, if you want to take us to a short break and come back.
(:53).

<<< **BREAK** >>> 498 KSW Aug 10, 2023 (:57).

K- Not really, we always say what we have to say. There are a couple of things as you know, that we are planning to end the productions and the materials which are at Keshe Foundation. We've made some of them, two for the price of one. That we clean out our, what we call, stock. (:58). And as we, in the next 6-12 months, gradually become part of a bigger structure and you will see much more materials and products through the new joint venture with the Chinese.

It'll be interesting to, what you call, how we will bring new materials, new understanding in the next cycle of what we call, products. But we have to get, we have to finish with these. As we have given notice to, literally move out of the Linz Exhibition Center, to all that products, we are trying to, what you call, share, it'll be, what we call, the last products from the Keshe Foundation as an organization.

In regard to Manchester meeting, a few people have moved their position to another sessions, like in November. So, if you, there are some of you still want to join, there's still one or two places available. And, now we are taking, looking for the November, and the meeting, the world ambassadors. We are striving now to have a very, what I call, colorful, exhilarating experience, in the weekends with the world ambassadors. Some of

them might join us from the beginning of the day, then just the evening session. And, we have put forward our invitation to some of the world leaders. ?? (They are) understanding the position we are in. It's much easier to create that condition, and we will, in a way, push to the advantages of this position, to be able to share the new Space Technology, and new understanding.

And, as I said, in next two years, (1:00). Keshe Foundation, the way you as Knowledge Seekers knew it, I think only, this Thursday teachings will be a remnants of the, greater Keshe Foundation work originally. As everything will move into a different scale. But, we'll keep the Thursday teaching as part of the totality of the teaching. We are working on it, step by step. The, what I call, it's not an easy job. And, as we grow, now out of what we are as a, what we call, a Foundation work, as a Foundation and a, what I call, part of a larger international organization. You got to bear with us, we will as usual, this is the habit of the Keshe Foundation, we still make mistakes, we will make some good mistakes and some bad mistakes, But overall, we should be able to move to a new dimension and direction. And we'll see where and how we will come out of what we call, this position in next 5 or 10 years.

If you look at the digits on the screen, we've been here 498 sessions, non-stop, every Thursday, doesn't matter how .. we shuffled it from hours, or whatever, we've always been there to share knowledge. In two sessions it'll become 500. And this is a huge, huge ?? Non-stop shared, non-stop participated.

In the back of now working with the strong nation and the structure like China, (1:02). we'll go back to a lot of things which we left before, with the intimidation of, what I call, we just take from, from the Germans and the hooligans in Belgium and the rest of it. We will organize ourselves in a way that no one can touch, no Knowledge Seekers. And we go back to open sharing, that you can come and show your products, you can come and show your intellect. You could share a way to be able to add to the knowledge of the others, without getting intimidated by the others. We'll bring in national security forces to protect the Knowledge Seekers to be able freely to work.

And as I always said, it's time for us to move on. It's time to change and a lot of us are working to bring that change forward. And now we have people who understand what the change is and are there to support, to give the helping hand for humanity to move forward, it doesn't matter in name of what knowledge and whatever.

So join us in Manchester, or join us in November in London, and then we hopefully start seeing a new dimension in what I call, understanding. And move away from this "Gans production" and everything else.

Any questions or anything you would like to share?

Q: ... (1:04). .. (K- You know it's a very strange feeling when you keep on saying Derek (Red Circle's name was Derek). Q: Hello your Excellency. ..

K- Could you tell us where you are from.

Q: I'm from Münster, Germany. And I visited the Space Center in Linz in June the 12th and the 13th this year. And well, I was very excited. And first I want to thank you, Mr. Keshe, that you give all this knowledge, which I'm getting through the workshops. And during that time I got mature with an age of 53. And I just add, my name is Dirk, D-I-R-K, and in German the day is "Dienstag," I opened the planet at 6 pm. I want to thank all who gave me this power to do it. And the only two things I saw was that the people calmed down, they don't walk that stressed like before. And all the paintings on the cars and walls and stuff got like they were sold yesterday. That was these two things I saw. But I guess there are a lot of more things which happened during that opening. (1:06).

So my question to you Mr. Keshe is, what else happened? Because I think this was starting the peace process, or the initiation of the peace process for the, globally, for this planet. That's, that what I, that's my thinking.

K- I don't understand your question, I don't understand what you explained.

Q: Well, I just pushed at the 6pm on that day, pushed the energy into the planet. And I just saw that the people calmed down and the cars got new painting and stuff. But my question is, what else happened during that planet opening us initiating the peace process on this planet, that's my question. If there are any other, other reactions happening during that opening?

K- The peace process is a long, long, long haul, road, and work. We as human race have battled and fought and we still seeing skirmishes of fighting, that a lot of us have ?? occurred and that peace can exist. But we have to establish that peace .. within ourselves first. And we've seen a huge leap compared to 10 years ago, with wars. We have more or less one war, which is going on now, which is, in a way, can be stopped with a flick of finger, but it's Christians fighting each other, as I call it, nothing else, in Ukraine. (1:08). And, otherwise, if you look, all of the scenery in Middle East is peaceful. The whole of scenery in far East, we had Vietnam, we had all the skirmishes in the far East, we had wars, Japan and the rest. All these are gone. This last war between the Christians in Ukraine, in what you call it, Catholic Church and the Russian Orthodox Church, soon will come to an end. And then we'll see a permanent peace. They might try a few skirmishes.

But, we have to maintain a momentum that man does not go back to this. You can make war out of peace, very easily you just need one trigger point. We have to change that position, we have to ?? reach that comfort, it's not there. And I see this doable, it's achievable. And once we finish with this animosity between, or what you call it, "two Churches who's got more gold," we will see a long haul of peace on Earth. But we have to push it, that there is a hope, there is a change. There is a next step, that we don't go back to it, that we start forgetting.

If you look at it, it's a habit. I'm Iranian and I'm proud to be from land of Iran. And one of our biggest points, (1:10). one of our glorious time, is that we have not crossed our borders over 300 years to war. We have matured a little bit. We've seen the Islamic

government of present time, which half of them are not Iranian. Our parliament in the first 20 years were half Iraqis. Our leaders are not Iranian. They don't carry a single blood from Iran in the first cycle. As Iranian, we never cross borders. 300 years, we don't see any reason for war. And if you go back to the time of the Persian Empire, During the time of Darius and Kourosh, they didn't fought. They expanded to Iran to be the largest, even to today's standard, ever, nation on Earth. By other leaders joining in without a fight, to be part of, to be part of a peace nation.

But, in times in between, we got arrogant leaders who wanted to show they have "testosterone" more than the other, and they went into wars. With 300 years we have kept our borders within. Now, can the humanity come and say in 300 years no bullet has been fired? In 500 years we don't have factories to produce tools of killing. And then we'll see we change gradually.

Q: So it's nice to know that the people who invented the firepower of China is now turning into a peace state. The first one. (1:12). ??

K- Either way we have to ingrain peace within ourselves, within our nations, within our, within our structure. And there are two ways now, at this point, to do. And I explained this to military people a few times up to now. We can go for building a more advanced weapon to be better, but by fear of having it, stop the others doing, or just don't make any weapons and just keep there. We were looking at the military data in the past few days, analysis in what you call it, political dimension. China has 2.4 (million) soldiers or military people under .. arms, or under the military base. And some of the not very far nations from this country have only 16,000 soldiers. Then you ask yourself, do we need soldiers? Because the 2.4 million and 16 (thousand) is nothing, just march it over, it's an ants.

What are the nation spending money on defense? We are in a position now, we are in a position of scientifically in a way to "put the carrot out," open the Space. And open the space not with war, that will be no war in the Space. (1:14). The way the politics of the Space has to change is that, we are going there because we are peaceful. It will be amazing for me to see... I wondered many times when I look at like this Apollo 1, Apollo 9 or 10 or whatever and we see this Mr. Armstrong supposedly walking on the moon. I asked this question for Americans once, and I put it to you maybe for the first time. Did he carry a side gun in his suit, in case he sees somebody he has to shoot? Do you understand?

Q: Yes, I understand.

K- This is the principle that we have to look at. Did any... does any of the people go to space labs with the whatever international labs, and the ones who are planning to go to the Moon, how many of them will carry a sidearm?

Q: None.

K- So are we going to say goodbye to killing?

Q: Yes, I guess through the next 5 to 10 years we are saying goodbye. That's my ..

K- Yes, but we have to watch, we have to watch, that we have to offer an alternative. We have to bring a condition of peace. As you know, Keshe Foundation is expanding in a very, very different... You've just seen the "tip of iceberg" in what is done, even people are inside the Keshe Foundation, most of them don't know what, where it's going, what is happening, or whatever. But, if you understand, if you comprehend what is going on, (1:16). in the next 5 or 10 years, do we need to eat, do we need to feed? Every time we introduce you, we ask you to come to these (Monthly) sessions of the Keshe Foundation. What are we offering you? What are we putting as a proposal?

(Just one second please, I've just got to get a cup of tea...)

What are we offering? What alternative we can put to our government? What is the proposition to Biden? In the upcoming meetings, in the ambassadors in London, what do we have? What can we show to the world leaders as an alternative? We have to, as a scientific organization, as those who many of you prayed, put (sprayed Gans) water in the things, and Universal Council members prayed for the wish for a peace, and now you got the peace, and we just want to tell you, only we look at this "flinky" job in Ukraine, how many of your wishes has been answered? All of it.

Why didn't it happen in past 20, 30 years, (peace) marching (on) all these streets and everything else. So the Soul of you Knowledge Seekers has a power. Doesn't matter how you turn it. And this brings you to a new point. What can we offer our governments, our leaders, our nationals, that they will not carry that "side arm" into space. (1:18). And what would be in the breakthrough for all of us, when we see this position?

I asked NASA people years ago, were there any guns on the Apollo? They said, "why you ?? shoot there?" I said, "why you lot keep on talking about demilitarizing the space?" Don't take the gun (you didn't take a gun, so), don't do anything. Space is demilitarized. Or are you trying to say, it'll be interesting, and I'm sure sooner or later somebody going to test it. How far a bullet will go, if you shoot it in the open space of the Moon. Can we shoot the aliens if we see them? Has the space people ever thought to leave a gun in there, in case we have to shoot an alien in space?

So, automatically we have lost this idea, when it comes to space. Our space leaders, our scientists, our astronauts, don't consider it necessary. Can we make it the habit of the man. Can we bring that change. But we have to offer a valid alternative.

As I said many times, when I went to England in 1973, the first time, I was shocked. In Iran we saw soldiers, I was brought up near an army camp, guns, and different shapes and size of it. I saw Americans as our neighbors and tenants and everything else, guns everywhere. I came to London the police officers had no gun. It was a strange, very strange feeling. (1:20). Police with no side gun. And this was ?? its comfort zone. A few

.. years later, for the first time I saw an officer in London with a gun. I went to him and said, "why are you carrying a gun?" He said, "the streets are becoming dangerous." I said, "you make it more dangerous carrying a gun, carrying it like this." Because to me it was a nation going backwards. Nation which was no arms on the streets, became armed. Now in London it's just worse than Holland. The only one who hasn't got a gun, I think, is the sick people on the bed in the hospitals. Everybody else carrying something somewhere.

So we have to not only make the Space a place of no war, but do the same with Earth. And we have to create and deliver a viable alternative. And that viable alternative is, teach you about your Soul. Teach you understand you don't need the cars and the, what I call, ?? angers and eagers of the financial world and the rest of it as we have not managed yet. I know the bank of China and the World Bank have not opened any branches on the Moon yet, that you can get somebody. Think of it, if you go to the Moon, and you run out of money, what do they do, they unplug your breathing suit? Or if you go with your Soul, you don't need it anyway.

So, a lot of things we created on Earth, automatically becomes obsolete in space, and automatically will come back to Earth to make it obsolete. We have to go through that transition. (1:22). And we have to keep the option and the technology open. So, we have already started the world peace.

We started the Universal Council, on the 2nd of August, few years ago. And that time, none of you Knowledge Seekers knew, except a very handful, maybe less than a handful of people, that actually the establishment of the Universal Council, the first session and everything else of it, was when we were in China. It was broadcasted from China, it was set up from China. And the whole program of the beginning of the Universal Council, started in the isle of Tarsania in South China Sea. So, China has been the birth of the place of the whole process of the new cycle, it's not new.

I still remember, we were with other Knowledge Seekers in the island, and at about the time, midnight, when we were starting the things, and the whole thing was going on, we saw a massive UFO over the whole island, over the buildings, with the lights and everything. We went outside, listen to the recordings of that time, how it was spoken about.

Because it's a Universal knowledge, it's a Universal desire of the man. And we stood out in our villa on the balconies, and other Knowledge Seekers near us in their villas, in their balconies, (1:24). looking at the sky and seeing the lights, the beautiful conditions of, what you call, UFOs, but in a plasma condition. It was amazing "fireworks." And wherever we went to establish, to bring that essence of peace, we see it happening. Space is a peaceful place, and by taking man to space, and bring him back to Earth, he'll become peaceful, because he doesn't have it there, what should it be here.

But we have to satisfy the hunger of the man, we have to satisfy the, what I call, health of the man, and we have to satisfy man to be secure on this planet. And then we move to a peaceful Souls, peaceful conditions and so on. Once you learn, you can travel with

dimension of the Soul. Once you get, learn that you can expand the dimension of the Soul, to get rid of the illnesses. Once you learn that you can use the expansion, connection of the Soul, to get the energies you want. Do you see slaving ourselves for 8,000 days behind the desk, that somebody gives you something you put something in your mouth. Or you spend your time gradually in developing conditions for peace within yourself, and then ?? move through your neighbors.

In a way, we have started the world peace. Go back when we started years ago, when we elevated the Soul of the world leaders, and look at it today. And even the situation in Ukraine is resolvable within one telephone call, and nobody is prepared to make that call. Telling the Vatican to, "pack your bag and go." And then we're all at peace. (1:26). As I said once to those who were in Italy with us, if the Swiss guards and the priests keep themselves ?? with each other, which is their job, then most of the world will be at peace. A bunch of "gay guys creating fun among themselves" has created ?? a mess for the others. And this is the position we are in. You always bring people around you who are the same as you to protect you. Ask yourself, why do we have a Swiss guard? The biggest gay club in the world. And who are they protecting? Bunch of child abusers. And now they want to take over the biggest Church in the world and Russians are not letting. Soon later it will be resolved, but it will be the end of Vatican. You'll see and you'll understand. We see the end of it.

Q: No more fairy tales.

K- No, this is reality. I lived in Italy, you see them. How many of Swiss guards you see walking a straight?

Any other question, please?

Q: And I just want to thank you for the ?? ring, I got the message.

K- Thank you very much.

Any other question?

R: Yes. We have another hand up here with...

K- You know something Rick. Sometimes, baffled, past 10 years we've been with each other in teachings, to see your face, when I talk about things. And you still keep a straight face. (1:28).

R: .. yeah

K- Where are our Italian translators? ..

Q: ... My question is a very simple question. As we know, our planets run around the Sun. (K- Yes) Now all our planets run around the Sun. (1:30). And every planet has the same center as the Sun?

K- You mean in our solar system?

Q: Yes, but the question is, is the Sun the result of the Sun of the plasma produced by each planet? Is it possible to reproduce the Sun in our world with small ?? gaps?

K- The total mass of all the planetary systems within the Solar system is in the same ratio as we see in the universe, about 5%, less than even 5%. If you put the total mass of all the planets, Mars, Moons, everything together, ?? and all the dust, cosmic dust, and everything together, it's not more than 5%, even if that, of the total mass of the solar system and the Sun. So we see the planetary system moving around and playing their games with the different sizes. But then we realize mass is irrelevant. It's the fields which dictates their position and their speed the rest of it. But their existence has certain control over the Sun, but does not make the Sun. We are the containment of it. (1:32). But we cannot make it to be.

The gravitational pull, the strength of the fields of the mother is too heavy. The love is too strong. So we cannot make it, but with the energies within it, we can be part of it or create another cycle with it. Not necessarily within the Sun, but outside the Sun. This is why Earth is a greenhouse (nursery). We're creating those little "dusts," called the STM. And these Souls in the future, in time to come, become the stars.

So, it has a capability, the totality of the structure of this matter state of the solar system, has the capability to create another star, without a doubt. But you have to create a condition for it, that they change from matter state to the plasma state. You have to observe, you have to understand how it works, that it leads to creation of. We can start with one atom at a high energy, and start the process of attraction between the two, and like an egg and a sperm, start the cycle.

In our assumption in the world of physics, it's totally upside down and wrong way, and we stuck to it, because that's what they told us. And that is, you, any of you, can start the cycle of life, by creating the interaction of the fields. (1:34). And creating a condition that, once you started this, you can feed it and create condition of the, what you call, life for it. Life means consistency to exist.

So yes. You can do, if you know how, you can start with one atom. But, the whole of the solar system, planetary and matter state of it, is too minute to control the Sun. The size of the solar system is not dictated by the Sun in a way, but it is dictated by the fields of the other structures outside it, which they allow it to expand into and control.

If we suddenly fall into a lighter field strength in what you call, our galaxy, if there is such a possibility, and suddenly our boundaries expand beyond, to fill up the gap, which is now it has encountered, and the whole of life existence, planet system, within second

will disappear. We are freaks of accidents of the Creation. You know when you go into, on a plane, and when you are flying, you suddenly they call you, you will get, jump in the hole, or turbulence, and you just go, up and down, or loose. Always imagine what happens if a solar system, or our Earth, (1:36). inside the solar system, hits one of these troughs, or one of these low field forces in the universe. How much will it drop? Trillions of kilometers. And if in that position there is nothing to control it, on expansion, the size of solar system doubles. So our position in respect to our Sun changes, and within seconds there is no life.

In some tests I have shown this, and I've shown how it becomes. Maybe in the future we replicate this test and you will understand. We are soon going back into labs and I think life will be very exciting for us to go back into these laboratories and development of new technologies for Space and everything else. And you will see a different sides, and we can replicate a lot of these conditions. Because we have the knowledge that we have moved into a very, very advanced stage of interaction of the fields and creation of dimensions.

Any other questions?

Q: ... Astral travel has been practiced for a long time by the physical Man. Is this astral travel done by the Man a separation of the physical and the Soul of the Physicality (STP)? (1:38).

K- Explain.

R: Well I suppose Cristiano would have to define what he means exactly by astral travel. I suppose coming from Brazil it might mean Shamans for example, claim to be able to travel outside of their body and go to other places, or other dimensions. And he's saying, is that separation, that travel, astral travel, done by a separation of the physical or physicality perhaps, and the STP?

K- It's not a separation, this is not separation, it's collaboration, cooperation. It's far from separation. When you can control, maintain, or operate. And this is the beauty of the knowledge, if you can do it. And it should not take long to be done.

Any other question?

You can take a drug and go high, which most of these people do. And then you can dream anything.

Q: ... (1:40). I want to work on mathematics and mathematical formulation of plasma. Do you think the plasma processes of the Keshe Foundation have been mathematically modeled yet? From Gans formulas to other applied processes?

R: So, he's interested in working on the mathematical formulation side of plasma. Is there any work for someone like that? The way you... You haven't given us too many formulas exactly for plasma.

K- I always said, "have you ever seen God putting, measuring things, and mixing together, and making a solar system?" Everything is accidental, coincidental interactions.

Let me explain to you, why it cannot be done. It's in a very, very simple way. You cannot, if you understood the process of the Keshe Foundation work, as a plasma, as a Gans, as a field, you cannot find two similar Gans's, I'm talking individual Gans's, with exact, specific characteristics at the same time, in the same place. It's absolutely impossible, it doesn't matter how you turn it. Now, how are you going to write a formula with... on... about something which you have no control over? You can say, "okay, I put one drop of Amino Acid (AA), I put one drop of Gans of CO₂." (1:42). Excuse me, how many Gans's are in that drop? Would it come to the time when we can count the Gans pieces in a drop? But then there is another problem, sorry, they don't all have the same energy. So, writing a formula for Keshe Foundation process of fields, you can try, it'll be very interesting. As much as you can stop a woman shoe shopping, you can do what I call, calculating. It's impossibilities.

Because the... we can work within a frame, try to create a condition within a frame. But, in that framework, you cannot even dictate. It's all in the hand of Creation and create, what you call, creation of the fields and interaction of the fields. This is how the universe has been. Opportunist and at the same time, with no control.

I said once, do you know why the universe and all the Creations you have, they're spherical like a ball? Because God loves to play football. And the footballers are the best opportunist. So, it's impossible, we cannot formulate it. If you understand the principle of the work, it's impossibility to formulate anything about dynamic plasmatic fields and the rest of it. (1:44).

You will understand this if you go back. I don't know if you even can find these papers anymore. Russian scientists in nineteen nineties and middle ?? end of nineteen eighties, start making computer programs and assumptions, how vortexes of magnetic fields of matter state, are created within the Sun, and they went all the way to the center. I have these papers somewhere, I've collected, because it was very interesting, how self-centered became the whole structure. How, actually, fields of, or what you call it, vortexes of the Hydrogen or Helium, build themselves into the center of the Sun, and then by compression of the center, they create that elusive fusion to go out as a field. Which is a lot of nonsense, if you understand it.

So, what was interesting for me, how did these people calculate what's the strength of these fields. How many Hydrogen pieces they consider into it. But it was very nice the imagination they used to do it. And it's impossibilities. Because every atom of Hydrogen, depending on its environment, depending on its strength, at the point of creation, and how long it's been created, .. what is given or taken, has different field strength. It's

impossible, if you truly understand the work of the plasmas. Because you cannot repeat it. Something is calculable, if you can. You cannot repeat it, because the next Gans you made, (1:46). even you use 100% Copper, has in it a different atomic structure of isotopes. And these isotopes in the pack you put, you put a one drop, how many of these isotopes are in there? You cannot measure it, and you cannot feel it. So, if you've been with me enough, long enough, you know, I work on average of, it does what it's supposed to do so, it has the fields. We cannot calculate it.

In .. 2008, right now, in August, September, when I was in Sharif Tehran University laboratories, building the first flight systems, first what we call dynamic power generators. This became a discussion between me and the Iranian scientists. They said to me, "you open your reactor, a few times a day." Because those days we had these, and now you all know, was the radiation source from the smoke detectors we were using. And I never used gloves on these things, I just picked them up, put them back in and then I created the activation for them. (They said), how does this guy works with radioactive material without anything, because I don't absorb it. And, I built a sense of where to position these two or three hundred, what you call it, radiation sources, in what manner, to get what field creation and what direction of motion (I wanted). And, I never relied on that, we do it this way.

I relied on what I could see, physically the fields will create, ionization and everything else, fields of the plasma, and I could say, (1:48). "okay, you've seen it, the big ball, how this ball will, what you call it, will move. Will it move to the left, will it move to the right? Would it, what you call, spin out of control?" And, this became a game for me for weeks in Sharif University. And, I used to open a reactor, move some of the sources to one side, and then close the reactors, it wasn't just opening and closing, it was all these silicon seals I had to use, and screws and tightening and everything else. Used like what, an hour, two hours, to actually get one system set. And I used to take the glue off the back of this radiation sources, move them in slightly, and I could say, "okay, now the system has to fly in the left side at what angle." And then we turn the system on, and we actually get it. And put this way, we were correct 2 out of 10, if we were lucky, but then we start to mastering it in more deeper, We became like 3 out of 10. And even that, 2 of 10 was a bit dodgy, but we could now dictate the position of the, what you call, rotation, or rejection.

We could not calculate, it's impossible to calculate how plasma will interact. How plasma will manifest itself, it's impossibilities. You cannot write a formula for the "Knowledge of the Creator." He didn't come up with a, what you call, a formula, why man is trying to do the job he never wanted Himself to do. Otherwise, you know, when He created the Earth, He would have dropped a letter in (saying), mix this, you get this, mix that, you get that. (1:50). He didn't do it, and I don't think any of you ever, with even the fastest computers, will be able to establish such a thing. It is absolutely impossible. It's far from it.

Try. I have had this discussion with many theoretical physicists. You can't put in a formula, it doesn't mean exist, it cannot exist. I said, "I put it in a system and it works." So you write a formula which you don't even understand. It is not easy task, but it's

literally impossible to write a formula. And you can repeat it. Once something is repeated, can be repeated, it's a technology. And we don't have knowledge to be able to repeat. Because it's in nature, it's a natural process.

I used to have a lot of laugh with this in Sharif Tehran University. And it was, as I said, it's guesswork, but seeing how your guesswork is and understanding what you guess, not just doing it. I would love to see if you can write a formula, and (if) you can repeat it. (1:52). That that formula can be used to repeat the same process. Good luck. And I really wish you the best. If you can do it, you have found in the solution for ???. I think the Creator would love you. Then He can say, "okay, repeat this, you get the Earth. Repeat that, you get the Moon and the Mars, and repeat that, you get this and that." He didn't do it. I don't think man will have the command of his knowledge to do it.

When you look at these two pictures, When I open up, it's exactly as you see it. These are the two reactors built just about 15 years ago in Sharif Tehran University. Originally, we built the left one. And the left one, the top part, is the one which flew for the first time. This is the first plasma reactor ever, took off the ground, the top part. The bottom part we had to rebuild, because the bottom part, it just blew its bottom. And we had to restructure it, and rebuild it. And, what you see, exactly on the other side, the small one, is the Moon side, or is the Earth. Inside these reactors there is a structure, a specific structure of reactors, in both of them. And, the left reactor, the bigger one, doesn't move. It's impossible, when you put these two together, (1:54). to get the bigger one moving. The smaller one always moves.

So, by putting different radiation sources, on what I call, let me see if I can do something here... If you look at the one on the left, the bigger one, the bottom side is a tank reserve. It's literally a tank reserve of elements we want. There is a specific ring, which is not here now. It's not in this one. This ring was a specific field separation. It's a specific steel, which Iranian government overnight shipped from Japan to Tehran for us to be able to put it in. And in this, once we put the ring, and the inside is specifically designed that the fuel adds up to the top as it's used. As we consume, it converts it to plasma, we call in from the reserve tank in the bottom. The top side, the dome, the half shape, is inside, has reactors, inside has a different proposition of work. Knowledge Seekers who work with me in the, in the San Sano, they opened this up, and they know the structure inside more or less. And then you see in the background, you see a little brownish thing in the back, this is the cooling system for the motor which was in the vacuum. (1:56). And what you see, cover up dots in the front, black dots, these are, again, what you call, the control systems of what we needed to change the charge.

If you see on the top, there is a pipe coming up and it's in different shape or direction, you could change some of the compositions to create different field of radiation. And inside, there are some 350 nuclear radiation sources in it. So how we move these radiation sources, and where we put the units on the right, we could decide how the right reactor will jump off and fly. You have to understand, now you see a framework. In Tehran test, this didn't have a framework. It was standing free on its own. It's like a moon rotating. So we fill it up. Now, in this small one, we again have another thing, 240 radiation sources,

something in that region. This is, again, multiple core. Both of them are multiple core. They are not single core. and cores are designed, if you... Still some of them is an original work, still in the labs in Austria. We added materials to it, inside it, we took material outside it. Then we could dictate, randomly, and when it happened, "oh, I was over the Moon."

And, we created a field in the big one. That the field we could see expanding beyond. We created a field in a small one, and we waited to see where these two fields touch, interact. (1:58). You could see a small vibration, always in the small one, and then it just flies off. Magnetic field forces of the bigger one, push the smaller one off position. And then it was a, what you call it, a "baseball game," "catch the ball." You got to understand, this thing when it used to takeoff, it has I think 12 screws, sharp steel screws. Try to ?? catch a "baseball" with 12 screws rotating at higher speed. I cut myself many times with it.

But an interesting point for me was, the lab is big. We never hit the glasses (windows) of the lab. We used to, we had a long table in the center, and we set this thing up. But the little ball, you see in the front, on the right side, even though we managed to fly some of that, we hit the ceiling once or twice. We managed, we fell on the floor a few times. We couldn't catch it. And it was impossibility to calculate. Even we. The radiation system inside was lined. We moved the line by half a centimeter in one direction, twice we got it the way we wanted to go. The other eight times it flew the other way. We could not calculate it. But at the same time, if you look at the small one on the top, you see pipes. (2:00). We were changing parameters to see how rapid these two reactors can fly away from each other. So we could create and control the intensity of the magnetic fields. We could never calculate it.

I'm sure Iranian scientists sat down, "bang their head" to it, to do it. And when you look at it, this small one, is the first proper flying nuclear power generator system. This one, after it took off and it exploded its bottom, we had to rebuild it. We never allowed it to fly again. It's too dangerous. So as one of the professors from the Iranian side said to me, he said, "Mr. Keshe, you came here to build the small one. You didn't come here to build the big one. And you got what you wanted." We had inspection. We had scientists from Iran, armed forces, military, Sepah, and all sorts paid a visit continuously to see the development was the next step. Even at night, when I used to call, used to ?? markets, was there, obviously, at night. They were coming in and checking and trying to understand it.

And if you understand, if you see this reactor, This is the same reactor that Netanyahu claimed to be Iran nuclear bomb. And we "washed it down the drain." He's been on the television convincing his pal, "Mr. Trump," that the Iranians are building, and this is a nuclear bomb. And this is ???. Yes, it's a nuclear based flying system, Mr. Netanyahu. And we are proud to announce. To extend it beyond, Iran military forces in Space are beyond the imagination of the man. And we respect and salute them, (2:02). for the integrity of not crossing Iranian borders with such a knowledge, but defending Iranian territory.

This is, that you cannot replicate fields. I am master it, but still impossibility to do. The next generation which we are developing will have a different effect, different position, different things. But, in essence, most of, most of the work is understanding and being able to repeat that position.

And the new reactors, the new style of reactors in the systems you came in with, takes off a lot of things out of discussion. You've got to see. If you look at the big reactor, it's actually a UFO. It's the shape of a UFO with a tank reserve. If I reduce the capacity of the reserve tank, closer to the top, what you see is more or less a UFO. The reason we brought this in, the reason I devised this and built such a system, because we did a lot of tests in Belgium, before I go to Iran. So when we are in Iran, we had a lot of clear idea how we're doing it.

This will not allow the turning of the reactor. We understand the field flow, plasma field strength, can create flipping. Because it happens on Earth, (2:04). it happens on the Sun. And the Sun magnetic field flips every 11 and a half years, every 23 years, goes back to its original position. When you build the system like this, you understand a lot of things inside it, doesn't allow flipping. That's why you can go with high speed, like a UFO. This system does not give you that possibility. It's absolutely loose, but it can reach saturation, it can reach current saturation, the current saturation in plasma is worse than plasma saturation. Because, and most of our scientists don't even understand this. And current saturation in the brain of the man, brings Parkinson's, epileptic. And we understand this, how to control it. In the flight system, brings disaster.

So, when you look, and you try to send, calculate a formula, you understand it's impossibilities to them. But, if you become master in it, you can approximately use it. This goes back now to the more advanced systems, which now you all come, or you came to, what you call it, to Linz. None of you saw any spherical ball on any of the machines. Because now we have gone into what we call, Book number two, transmutation through light. The cylindrical, what you call, plasma field flow. Which is, none of you will "have a clue" how it exists. (2:06). And this is why it's a different story.

Now your Soul is the "big ball," in a way. And the little Soul (reactor) is the STP of you. And if I play with it, you will see shimmering of lights, manifestation of the structure, somewhere, as you see, on the right in the escalator. I can give it manifestation. I can give it physicality. And you actually, physically see it. And the system is inside.

This is what we did with you when you came to Linz. Blurred eye, you could see blurred, because the Soul has expanded. Cannot be formulated. But, there is one common denominator in all of it, if you understand it, then you can structure it. It's impossibility to write formulas. Because no energy system is the same. That's why God gave up and said, "I'll mix it, whatever comes up, it'll come and what it turns out, to be Earth." He couldn't control it, he couldn't write his formula, I don't think you'll stand a good chance for it.

These two reactors have a beautiful history behind them. And how they were built, and how they became, and the latest controversy we've seen, the use of it by Netanyahu, the

most evil man on this planet. Using a space reactor to be a nuclear bomb, trying to find, to gather forces to kill more. (2:08). But in essence what you see on the table is the way universe works. But you cannot formulate it, we have to understand it, to get the desire of it.

Any other question?

R: Mr. Keshe, I found the video that, where you actually show those two units and talk about them, would you like me to play that, or are you done with that?

K- ??, from how long ago you are going back to, years ago.

R: Yes, this is way, way back. Back in the days of the Spaceship Institute in...

K- When you and I were ?? around, yeah.

R: Yeah, when, back when I was there, just around that time, just after that time, I think, this video. Okay, if you think it's fine, I'll play that now.

K- Yep. Yep.

<< Rick plays old video of KF about KF reactors >> (2:14).

K- Thank you very much. That brought back a lot of memories, Rick. This was done in the education side of our home, in the San Sano. And it has brought a lot of changes. We see the development and delivery of the next cycle of what I call, space flight system to be done in conjunction with the Iranian military and Chinese military in the space in the coming weeks. It'll be amazing to see how technology, even being the same, has leaped forward by hundreds of years in 10 or 15 years. (2:16).

We, for example, in this configuration, you saw things going on the floor. And it was the beginning of the setup. Later on, in tests, we managed to create 129 Tesla. And then, in the same lab, every night when we ran these systems, when we switched off the lights, the fluorescent tubes on the ceiling, used to dance, used to switch the light up and watch how the fields from these reactors interacted with the fluorescent lights. And we had a light show every night, more or less, for 5, 10 minutes, till all the plasmas in the room were used by the tubes.

If you look in a deeper way, at the moment you see these pipes, the blue pipes going in. The new systems which will be introduced, will be controlled by thoughts. It means, "what I do, what I think, I'll control." In a way, you call it interaction of the Soul. And it'll be interesting to see how it will change the characters of the people around it. It will be interesting to understand how this feels, if you understand it now, there is a third reactor already on this table, which is the Soul of the presenter, which at that time we could not explain to discuss. (2:18).

When you look at the star formation, the STM is an operating ?? life (live) system in that system. It's a controller, your emotion controls a lot of it and a lot of people could not understand, still cannot understand. But now that we have shown the working of the systems in Linz, a lot of you understand, you are the Sun when you sit in that system. You're not just a Soul. You, when we put you in the Head Units, your Soul is the Sun, it's

the dictator of the whole thing. The expansion, the control, it's totally dictated by it, and it's emotions. And it's the same with here. That's why many tests I did, it could not be replicated. Because I cannot explain, I'm using the power which is within. As I said, man is too physical.

You see this, the new, what we call, Space Center, in... of the Keshe Foundation. When you sit in these units, even the Head Unit, your Soul is the dictator of the change within your physicality. We will see many of these centers to open up around the world. The center and the system will openly shown in public in Macau, (2:20). what we call, conference. Where we allow people in the conference to personally test the system, the scientists from around the world.

And, it's interesting for the whole understanding of the creations within this system. It needs a wise man to see and a wise man to know how to use it. These systems as you see are more or less obsolete, compared to what now has been produced and sitting in... Most of you who joined the, what we call, July Session, were connected to that system. Only one part, these systems were connected to you and we saw a lot of you, shown a lot of emotion and changes, using this, in one of the sessions. All these systems were connected to all of you, when you were in the session.

And, if you understand the power of the STM, you have managed to achieve a lot. Thank you very much.

Any other question?

Q: ... (2:22). I have a question about our solar system. There is an asteroid belt between Mars and Jupiter. Was this a planet in the past? Can you tell us something about it? Thank you very much.

K- No, asteroid belts and all these things comes from the condition created, and has the Inertia, plasmatic field Inertia to not only trap, but create materials which can sustain that Inertia. And it's between all planetary systems. It's the face of.

When your Soul interacts with your STP, and with the Inertia of the environment of Earth, makes your body, your physical manifestation. So, all these asteroid belts, when you see them, when they talk about it, now that you understand the knowledge, is the interaction of the two fields, what it creates. Don't forget the Inertia in that case, when you see them, is the Inertia of the field, or strength of the Inertia of the plasma of the solar system. So you always have that. And these belts we see them, brings, you call it, the belts, asteroid belts. The same thing in another version we call it, the "rings of Saturn." It's no difference. It's exactly the same thing. And depending on the strength, it manifests itself in different ways.

Many of you, I've seen this so I can tell you for the first time, (2:24). maybe you will laugh at it, but soon you will see it. Many of you, when you go through a transition, you'll see your head but you don't see your body. You go through a transmutation, because the

field of the environment you're in, is different matching to the physical Soul, and it's like you see half of the body. The first time we saw this was hilarious. And we saw it again with the disappearing of the hand when we were doing tests with Ali in Canada.

And the reality is, each field interaction between two systems, creates it's own, what you want to call it, a belt or ring. And it's usually is on the strength of the two fields, because it's like a funnel, between the center line fields, which is more balanced. So, there's nothing different, is a manifestation of two fields interaction, this, one of them call it, a Soul, one of them we call it, the STP, and the Inertia environment of the solar system, that allows to create a condition, that in that condition, call it a ring of Saturn, we have it around the Earth. Around the Earth we have such a belt, it's very, very faint. And most of our meteorites get bulleted through that part. In the dust you see, comes from this point. And it's just fields convert to matter and then now, depending on gravitational pull of one or the other, they shoot inside the ?? (2:26).

So it's nothing new, with the knowledge you have, you should have understood that straight away. And many of you, you will see it, again and again. It's the natural characteristics of a spherical field interaction. If you adjust it, it can become liquidish, If you adjust it could be solid, you could, then if you adjust again, it could be different size of blocks, or whatever in those belts. As we see with the ring of Saturn. Read the paper I've written about the creation of ring of Saturn. And these things are answered immediately by all of you.

Any other question?

Q: A question Newton had back in the day ... Why does the apple fall from the tree? Is the apple magnetic?

K- Oh no, those all to do with inertia and the rest of it. Can you imagine where science would have been, if he wouldn't have fallen asleep under the tree. And it was a time when the apples were falling. Where would the science of man be today? Thanks to the apple. (2:28).

R: Well we had a little short discussion about that in the Plasma Group, that what if instead of figuring out all the laws of the apple and the Earth and all that stuff, why didn't he cut the apple in half and have a look at the construction of the apple, which is very interesting in its kind of a vortex shape inside, as well as the way the seeds and the inner core, literally we call it the core of the apple. It is a reactor with its own core.

K- Yeah.

R: It's similar to other reactors in the universe. Maybe we could have gotten into plasma technology, instead of all the, the other nonsense that's came, come from the gravity. We still don't know what gravity is, in terms of the scientists of today. So, they have all the formulas though. They do have the formulas, but they still don't know what it is.

K- Yes, but the formula is because you have a solid mass, you can measure the mass. Formulas goes through the window when you have a plasma. It's a big difference. This is why us, as Knowledge Seekers, "have to always stay on top of it." We're dealing with two different entities, and both of them are real. One is a plasma, one is a matter state. If you understand this, we see a lot of steps forward for humanity and his knowledge.

But, we cannot ridicule what man has done. That's the matter state, we've done the best we could. (2:30). Now, we look at the energy, what we call, plasma. This, the matter state is the world of the man. Plasma is the world of the Creator, and Creation. And the sooner we understand this, the sooner we will overcome these dogmas of science. We cannot laugh at them. They went wrong. They didn't go wrong. They are right in the matter state where you can measure everything. It cannot be done in a plasma state where it's just fields.

I taught once this to a Knowledge Seeker. He tried very hard to make a consistent, what you call it, Gans. That he can do a specific test. I said, "you know what's your best choice? Is to dry it." And then when you dried it, try to understand how you measure the fields, and then count the number of Gans's in your dried pack, and then go back and do it. In the future maybe we'll do that. Even today we have knowledge to do it. And maybe we come to nearest, because not every Gans drop is the same.

But, in essence, we have to always to be on top of us, in ourselves, in knowledge. Which world do we live in our schizophrenic life? The energy side, or what you call it, the matter side? (2:32). In a way, if you look at it, the energy side in slowing down, or not slowing, reducing the strength, become matter state. So, even the matter state is still the energy. So, we have to understand, which state of fields interaction we're talking (about). Manifestation of it, or still loose as fields.

I always explained it in a very, very beautiful way. To me it has a lot of meaning. Is it love, or is it the lover? We cannot quantify and explain the shape of love, but we can explain the shape, the color of the eye, the hair, the leg, the arm, whatever of the lover. Does love live, exist without the lover? And can we explain what love is, if we don't understand the love? And this is the dilemma man has with the matter state and the plasma. If you understood that, you understand this. Otherwise, respect both. Because you still say, "I love, but I have no lover to love. I have a lover, but I don't know what a love is." And this is very common in Chinese. Chinese tell you they don't know what love is. But there is a lover. You have to appreciate both, to understand both. And this is the position man is today. We have had many lovers, but we don't understand what the love is, and we call it, plasma. (2:34). Because we can tangibly touch the love. And this is what, as Knowledge Seekers, we have to understand they both exist, and one cannot exist without the other one, if you're going to enjoy the creation of the Creator.

Any other question?

Q: ... After the addiction session of last April 27th, I was a lot connected to my Soul and could remember many of the Soul interactions during my sleep time, day and night, every

day. Three months later, I lost the connection in a way and can barely remember time to time interactions. Why am I losing the connection? Is it because I went back to increase of my food consumption? And what can I do to maintain that connection?

K- It's like to keep fit you have to exercise, isn't it? You got lost because you had it. That's all it is. Once you learn it, practice it. Don't let it go, till it becomes second habit. And then you'll see a lot of other things. And this is part of what we need to understand. Once you learn it, don't let it go. Practice it. And then it becomes more and more perfect and everything else.

I've said many times, 99% of the time, (2:36). I have had, especially when it comes to sleep time, am I asleep or am I awake? They tell me I snore the whole night, good. But to me, I'm there, I'm working, I'm putting things, I'm testing, or understanding. But, physicality has gone it's own way. It's repairing itself and "I am snoring half of the time." But to me, I'm awake. And they say, "oh no, you cannot be, you were snoring." I couldn't because I'm literally working. And I know what I've done, what I'm doing, and what is in the middle of... When they let me go, I go back to what you call, physical sleep, but actually doing what I was doing. There's no difference between sleep and life, for past, God knows, years and years for me. But somewhere down the line, physicality takes his rest.

Q: ... What does it mean when during the sleep time it shows you a huge family verbal fight? Does it mean the Soul goes also for fight?

K- It's the habit of the man, isn't it? I always said, when you fight for something, you have already lost. When you fight to keep a lover, you already lost the lover. When you fight to keep something, it's already not yours. Otherwise, you don't need to fight for it. So if you, in your dream, you fight, find out what you've lost, that you manifested it as a fight. When you see two people together, couples or whatever, watch them, (2:38). why they are fighting at each other all the time. Because they already lost the love, it's not there. Because, if it was there, they wouldn't fight for it.

Last question, and I have to go.

Q: ... I'm pretty alright, but there's something that's niggling at me in the need for understanding about Iran's position. ... Now, if I'm correct in understanding, The Iranian people have a problem with kingship of other people in nearby neighbors that call themselves kings, and they have a problem with the kingship. But lately there's been a new way of thinking from both sides. And this has changed everything. And it may be a geopolitical question, but how do you think that things have changed? (2:40). And why Saudi Arabia just suddenly decided that, knowing both sides of the equation, that they would come closer to them?

K- You mean with the Iranians? I'm going to put it to you in two or three different ways. There is a reason for it. First of all, Iranians are not against the kingship. We are a kingdom. We've always been an empire. The first time in the history of Iran in past ?? 40

years, the foreigners took over the Arabs, what we call, the "Ayatollah side." The most of the first years of Ayatollahs are not the Iranians at all. The two brothers heads of the parliament of Iran, and the rest of it.

The opposition or what I don't accept personally as a kingship, is that there is nobody higher than the other. So it is not the Iranians. Iranians are king lovers. We always had kings. At the moment, what you call it, the rule of "gun and swords," and Arabs who are ruling Iran. You saw the uprising of past few months, and you saw how the people were slaughtered. These are all Palestinians, people .. brought in from Syria. They don't speak a single word of Farsi. They are paid triple price to kill, to hold on to power. Would we see back, .. a king in Iran? I doubt it. (2:42). Not at the present position. But it's not that Iranians, are not "king lovers." We are very much, very much, it's ingrained in our life.

But as a scientist and working at this level, I don't see anybody higher than the other, knowing the Soul's work, than actually the physical frock. But, in the present position with Saudi, it's a totally different matter. There is a new structure of work, which is works on a matter of peace, because economical needs are bigger than peace. And a lot of things happened in the past two years in Middle East, which pushed Saudi Arabia away from America. And the Chinese saw the opportunity, and brought the Iranians and Saudis on the table.

The original reason, Saudis did not know where to go, but on the other hand, they had nowhere to go. They listen to the Israelis, if you look in past 4 years, Israelis open relationship with the Middle East, the Arab nations and the rest of it, and everything else, and go back into news, they sold, I think, 100 million defense technology to Saudis, from Saudi, from Israel, to defend themselves against Iran, and everything else. And, when in January of 2020, Iran wiped out the American most advanced base (in Iraq), plus Europeans on it, with hundreds and hundreds of military officers wiped out. To defend the territory of Iran, for what was planned to attack Iran. (2:44). The position came, and I directly put it internationally, and it was passed on, and understood by the Saudis and Middle Eastern countries, if the Americans could not protect their most advanced base, from the new simple systems of Iran, which the Russians recorded, it's just black things moving forward and just annihilating the whole land. Why are the Saudis sitting there for? And buying these technologies, when the people who sell it themselves, cannot actually show any use for it, they couldn't defend themselves.

That attack in January of 2020, changed the whole structure of the Americans selling weapons, in exchange for keeping Iran out. Saudis were running with their heads in their hands, what a fool, but they made a mistake, and they gave the system back, and the Americans were kicked out of Saudi about a year ago. In their defense, what you call it, missiles. But on the other hand, there was a fear now, they don't have this, they don't believe in it, all these Scud missiles and the rest. China moved in and brokered a peace between the two. And Iran has a very deep relationship with Saudis. American exploited it to split it, "divide and rule" with the British. And now China has put it back in track. And we'll see more and more of this, because they're all making, what you call it, things out of it.

If you remember, we still own a website called CIBRU, which is China, Iran, Brazil. I set this up some years ago. (2:46). And we now see CIBRU taking shape in a physical dimension. Iran, China, Brazil, Russia have joined the CIBRU. Look Brazil in April of this year signed a specific contract in space development technology with China. Back of it, Keshe Foundation Technology. Iranian space technology is backed with it. So, we see what we said years ago, there is one left out, that you would end, which you put as United States, and there is a correction with it, I was explaining very recently to some Chinese and that is the rest of the "United Earth." Which means we share the technology with the rest of the world.

We do not consider America to be anymore on the edge of the space technology. Actually now you're at bottom of it. And so the CIBRU has taken shape. China, Iran, Brazil, Russia. .. This is what is in the news. We don't say anything because we just set up. We always put things in advance and we see it.

So, we see there is no need to spend 100 million to buy things from Israelis and the Americans Scud missiles which does not work, because the "devil" they made Iran to be, is not there, and you will see a massive trade relationship. But, the good things for the Chinese has been, in establishing peace between Iran, and Saudis and the rest of the nations in Middle East, they're guaranteeing their own oil supply and gas supply. (2:48). Because, the biggest consumer of oil and gas is China, they need it, so they have to play the tune of China. And the tune of China is peace policy. Economical growth is above "gun policy." Where America "gun policy" is above economical (policy), because we're doing.

Very soon, in a very, very short time, in the coming years, you will see Keshe Foundation in conjunction with the Chinese and the Iranians, we will move to eradicate seed control, GMO. It is already "on the cards," the structure is getting set up. And, when now we got rid of this "gun policy" of United States, we get rid of this "seed control policy," that no farmer in India needs to kill themselves and leave their children orphaned. And no Chinese will, what you call, farmers can live on poverty, because they cannot lose one cycle. The Chinese farmers in a very soon cycle, maybe even in the next year, if we can start it, will use the same GMO seed, but convert it to the natural seed, which means they don't need to buy seed next year, which is half of their income for the next harvest to live. It'll bring China out of poverty, especially a lot of farmers. Chinese have a different understanding of it.

And so, we will see the two things which brought mayhem and war around the world, and hunger, and literally hundreds of thousands of farmers kill themselves, because they cannot buy the seed next year. What they eat, that's all. Next year they don't have the money to buy. We'll change this with the collaboration with the Keshe Foundation Chinese, what you call it, scientific and farming community.

So maybe in two years time, three years time, in China we buy, what you call it, GMO seeds. But in the process, we take it out of the process, and become a normal seed.

(2:50). And the farmers don't need to buy again. So this is creating a condition of peace. And this is one of the works now Keshe Foundation is involved in China. That seed policy, like the gun policy finishes, then we see nations can feed themselves.

From where we sit, I'm looking across the most beautiful city of the world, Beijing at the moment, where the teaching is coming from. We see China to become the breadbasket of the world, on the emergency, not for control. It's a big difference. America pushed itself to become breadbasket by creating wars, division, and then seed control, GMO. China is going the reverse, where we put the knowledge, we put the technology, we put the use, the technology, to show, to bring the farmers that the seed control does not exist.

It's literally, you know, you buy a poison food and you put something on it and you get rid of the poison. It's like a dirt, more or less, on the seed. We can change it through fields. And we have shown it, it has been done. And so we will see another "feather" of the, what you call it, the wings of American policy, gun policy and GMO policy. And this soon will stop.

GMO is needed for betterment of seeds, better harvest. But not the layer to not allow the next generation. And we have found a trick how it works. How you can buy GMO seed, grow your, what you call it, tomatoes, potatoes, rice or whatever, (2:52). and using the right structure, right field structure, the seed will change. Don't forget GMO is built in. It's like you, it's a frock. We can take it off. But up to now, we didn't know how. Now with plasma technology, we know. And the GMO is down the drain. It's for sure.

You will see the structure of the Chinese grows that way. But the food policy, national food security of China for the world, is that we all have. And if you want to bring comfort and peace, you have to work not only for your nation, but all the nations. And this is part of our work and signed agreements with the Chinese government. Our technology will not stay within the border of China, but will go out of the border of China for the rest of humanity, unconditionally. They didn't put any condition on application. And we have tested, we have shown how new position comes.

And this will help countries like Iran. Now we get rid of GMO, we can feed our nation. Arabs will come to the same way and the rest. And in a way, step by step, we are moving towards maybe another 5 to 10 years, that we can feed every man on this planet. And I said in the past few days, we were at dinner, with one of the most, with the people who run this country and I explained that, go a step further. If you're sending food, if you can transform food to people on the telephone line, we can feed nations on the telephone line. (2:54). National food security by holding grain in thousands of tons and controlling, is finished with the new technology.

And all your Knowledge Seekers know it, you put the headphones on. We tested it, we're testing more and then we see more and more how it comes. And as I said to the Chinese, we have found the code. Now we all have to decode step by step how we bring that position together.

Some of the targets of the Americans for most of the nations when they're going to war, which usually doesn't come out in public, is hitting food silos, national food reserves. But they never tell you in public. You don't do that to your dog, let alone to a nation. And with the new systems, especially what, like, what Rick just showed, into a new advanced systems, we can feed, if there is a disaster in the US, and we can feed them from China, with the service centers. Just put a headphones on, you want a "fish and chips," you get a fish and chips. So national food security and using food as a tool to control, it shows itself. This is the system right in front of you. We are testing it every day with you. This is the change.

Shall we call it a day? I have to leave.

Thank you very much Rick. Thanks for today and hopefully we meet you here. (2:56). We try to share on the, what we call, Thursday of the teaching from Manchester, that you share with us, with all the Knowledge Seekers who are present in the conference. We run a, what we call, open session and we hope we can share knowledge with each other at that point. Thank you very much Rick, and see you hopefully soon.

R: Okay, thank you Mr. Keshe, another great workshop here. This has been the 498th Knowledge Seekers Workshop, here on Thursday August 10th. Two more workshops to the magic 500th mark.

K- I think the 500th will be from Manchester. I think so, somewhere near there. Possibly.

R: That could be fun.

K- Maybe that would be fun, yeah.

498 KSW August 10, 2023

END
